

easy.jobs WordPress Plugin

QA Test Report

Tester: Ashakuzzaman Odree | Date: April 25, 2026 | Submitted to: Startise

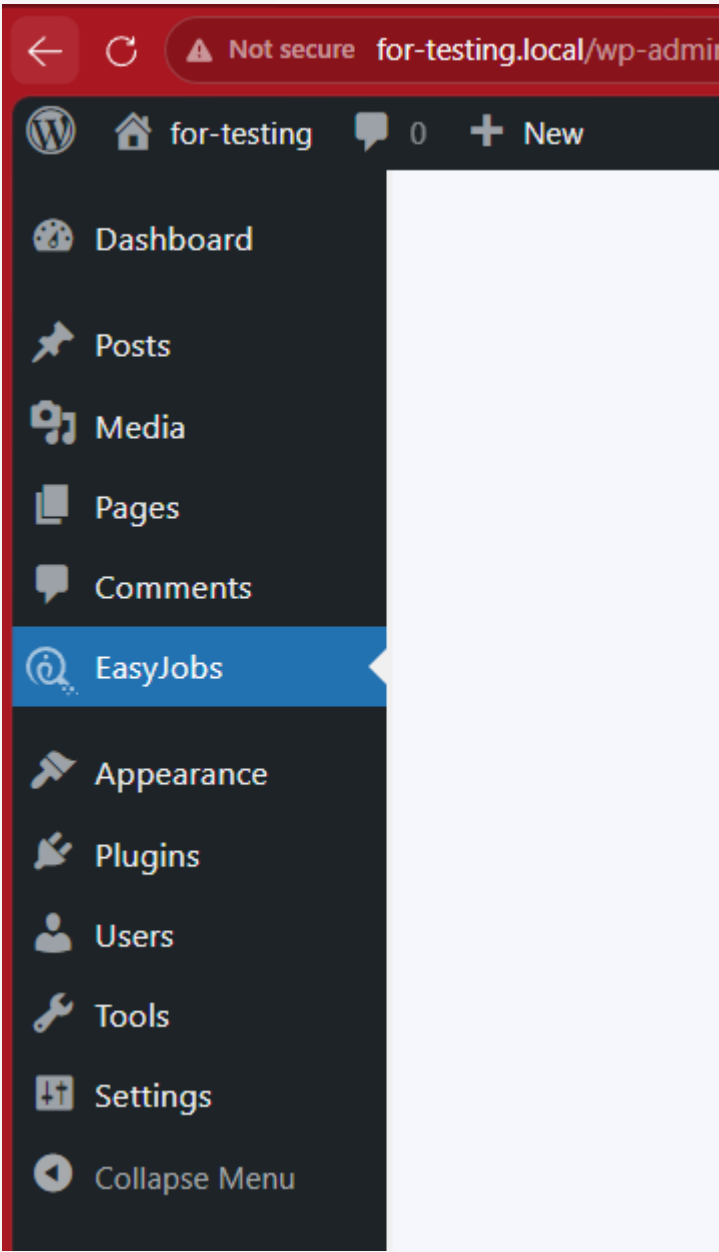

1. My Approach

I reviewed the plugin source code first to understand the main feature areas, including the API class, settings, admin, public, shortcode, Gutenberg blocks, and security-related logic. That review helped me identify three bugs directly from code before running the plugin. I then prioritized the test cases by risk so the most important flows were covered first. I focused on installation, authentication, job management, frontend behavior, candidate management, settings, security, and edge cases so the report covered both functionality and user impact.

2. Test Cases

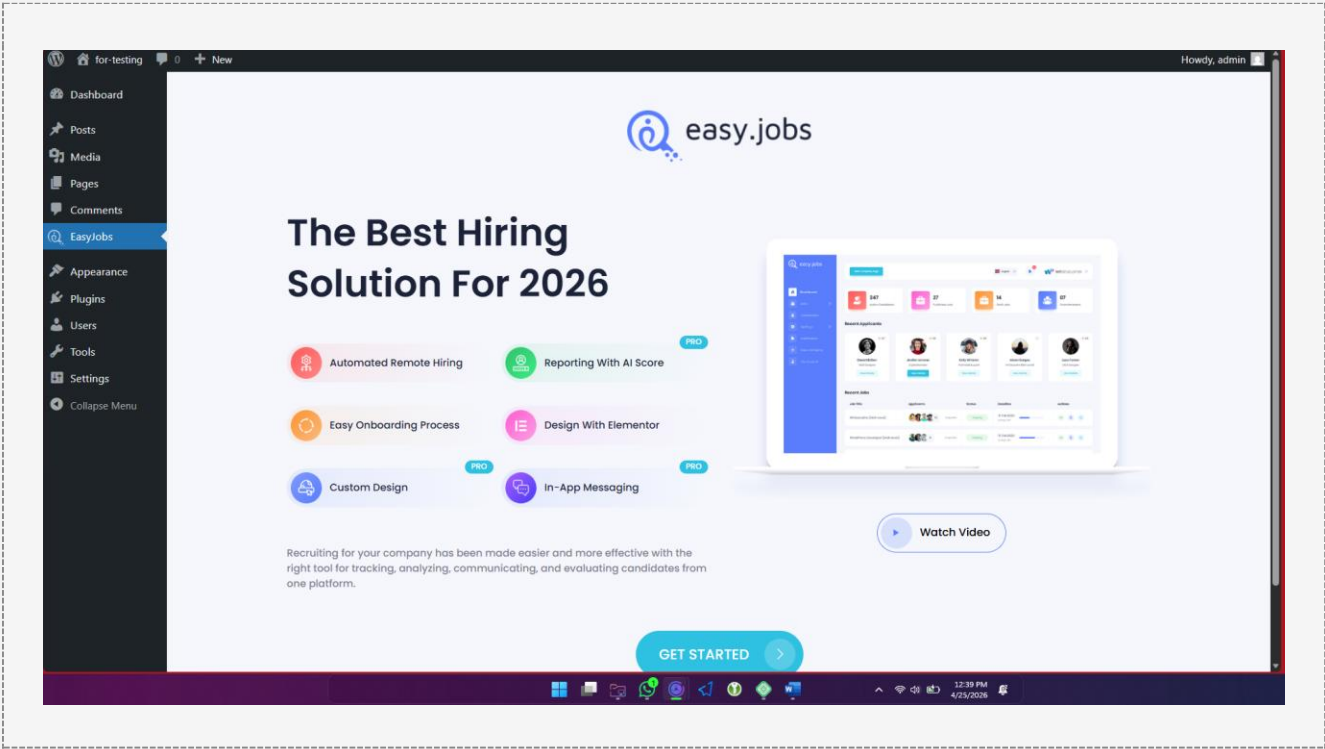

Module A: Plugin Installation & Activation

TC-001 — Plugin installs and activates successfully	
Module	Installation
Test Steps	1. Plugins > Add New Plugin 2. Upload Plugin 3. Select easyjobs.zip 4. Install Now 5. Activate Plugin
Expected Result	EasyJobs menu appears in sidebar. No error messages shown.
Severity	Critical
Result	PASS
Actual Result	Plugin installed and activated successfully. EasyJobs menu appeared in the WordPress left sidebar with sub-items: Dashboard, Jobs, Candidates, Question Set, Assessments, and Settings.
Video Evidence	Paste YouTube link here:

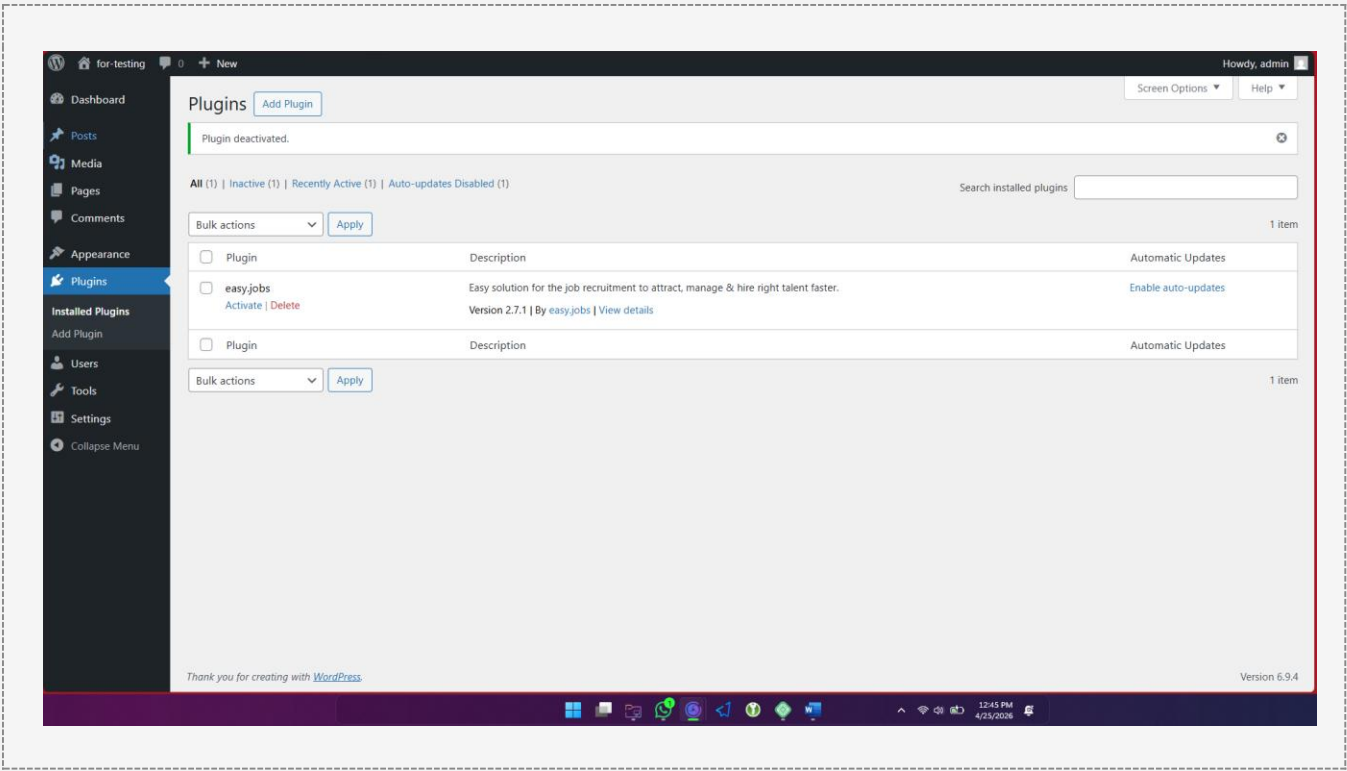

TC-002 — Plugin landing page loads without errors	
Module	Installation
Test Steps	1. Click EasyJobs in the sidebar 2. Look at the page that loads
Expected Result	The easy.jobs welcome/landing page loads. No PHP errors or blank screen.
Severity	Critical
Result	PASS
Actual Result	The easy.jobs welcome page loaded correctly showing all features including Automated Remote Hiring, Easy Onboarding, AI Score (PRO), Elementor Design, and In-App Messaging (PRO). Version 2.7.1 shown. No errors.

Video Evidence	Paste YouTube link here:
----------------	--------------------------

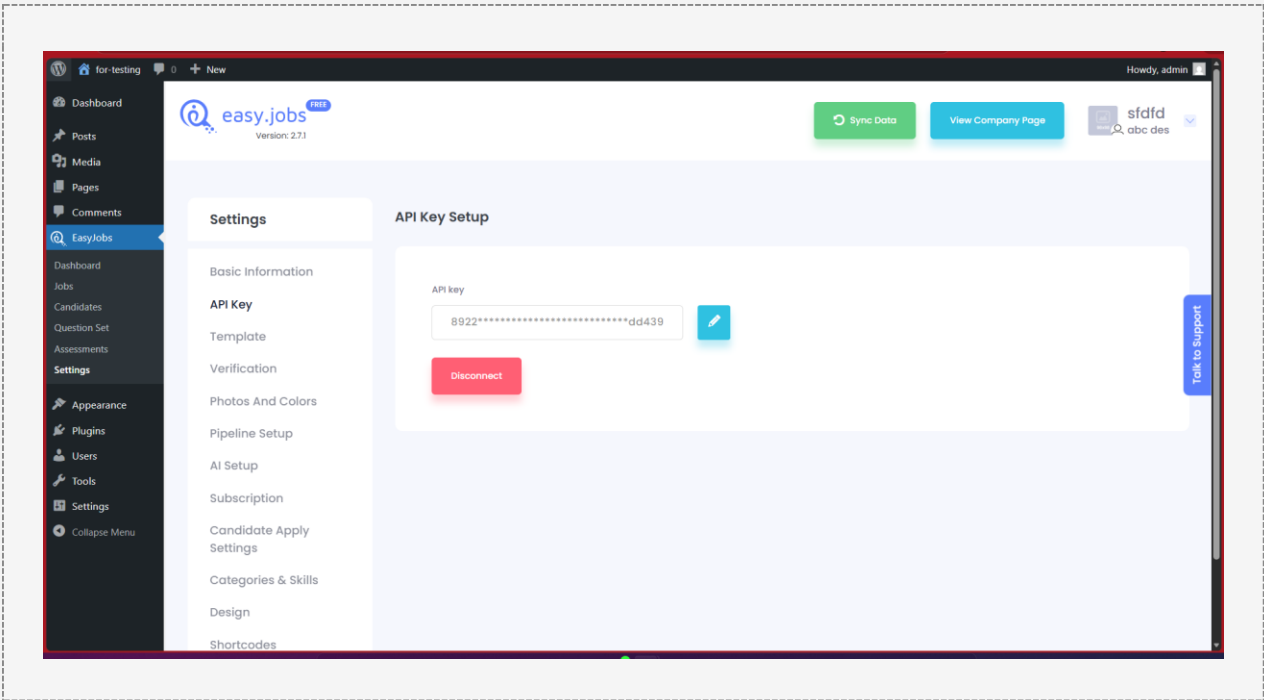

TC-003 — Plugin deactivation works cleanly	
Module	Installation
Test Steps	1. Go to Plugins 2. Click Deactivate under easy.jobs 3. Check for errors
Expected Result	Plugin deactivates with no PHP errors. Reactivate after this test.
Severity	High
Result	PASS
Actual Result	Plugin deactivated without any errors. The Plugins page confirmed deactivation. Plugin was reactivated after the test.
Video Evidence	Paste YouTube link here:

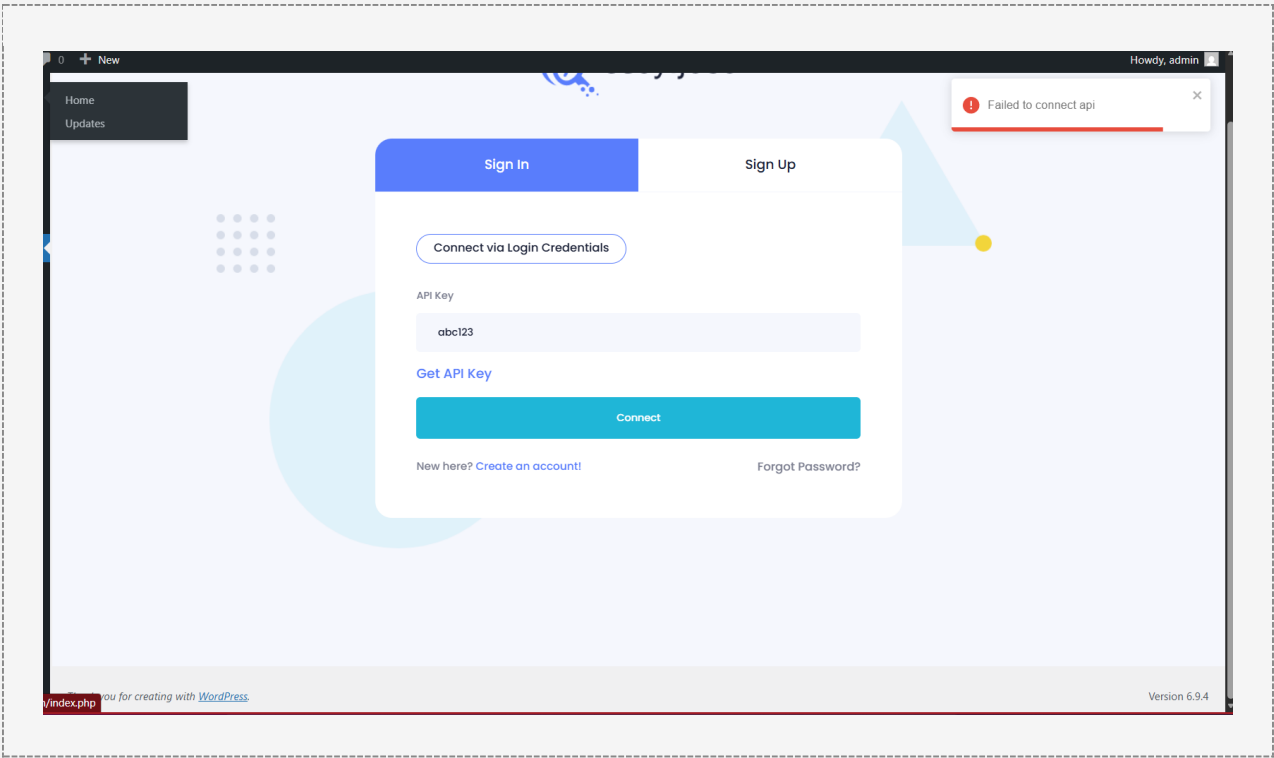

Module B: API Authentication

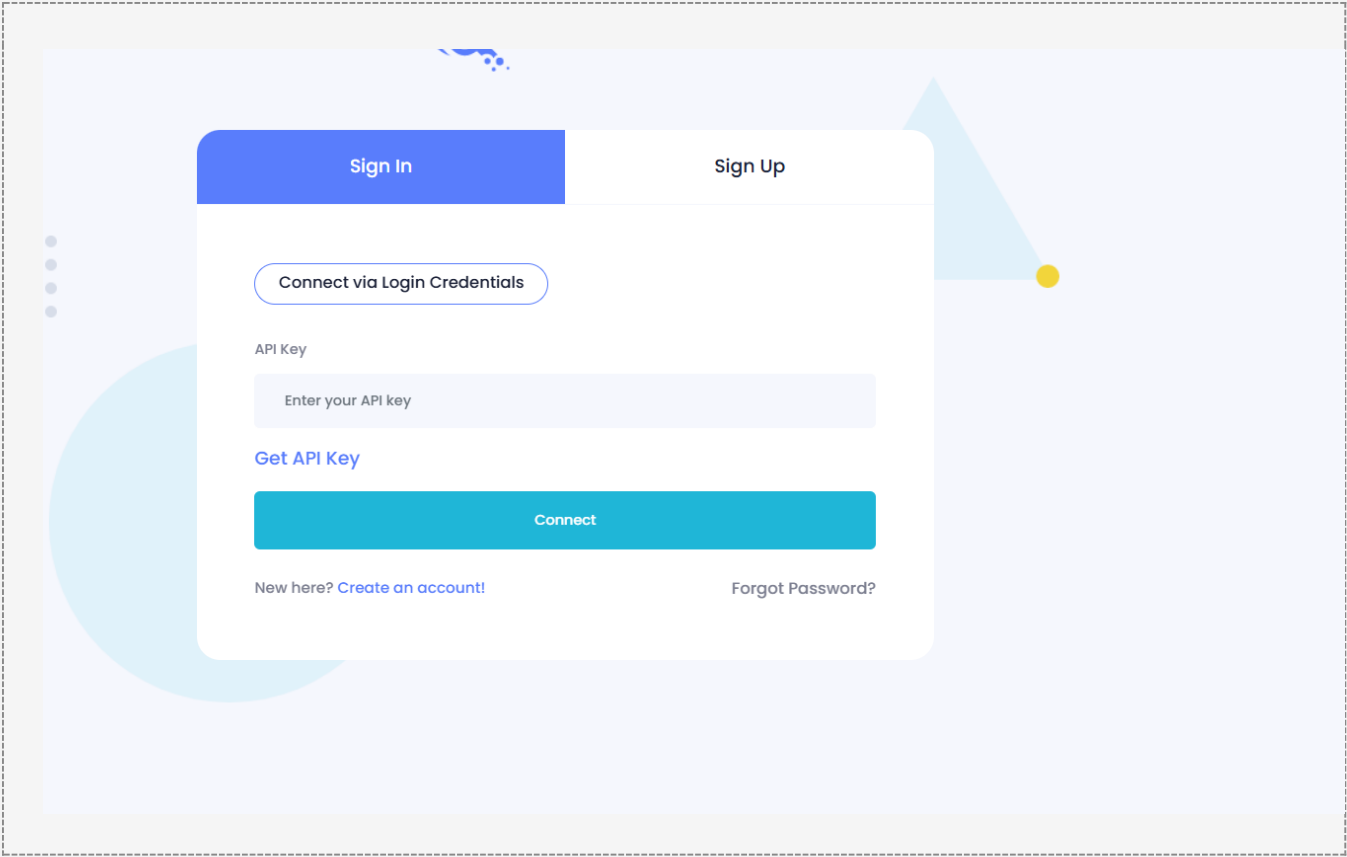

TC-004 — Valid API key connects successfully	
Module	Authentication
Test Steps	1. EasyJobs > Settings 2. Enter valid API key from easy.jobs account 3. Click Connect
Expected Result	Success message shown. Dashboard loads with your company data.
Severity	Critical
Result	PASS
Actual Result	Success message shown. Dashboard loads with your company data.
Video Evidence	Paste YouTube link here:

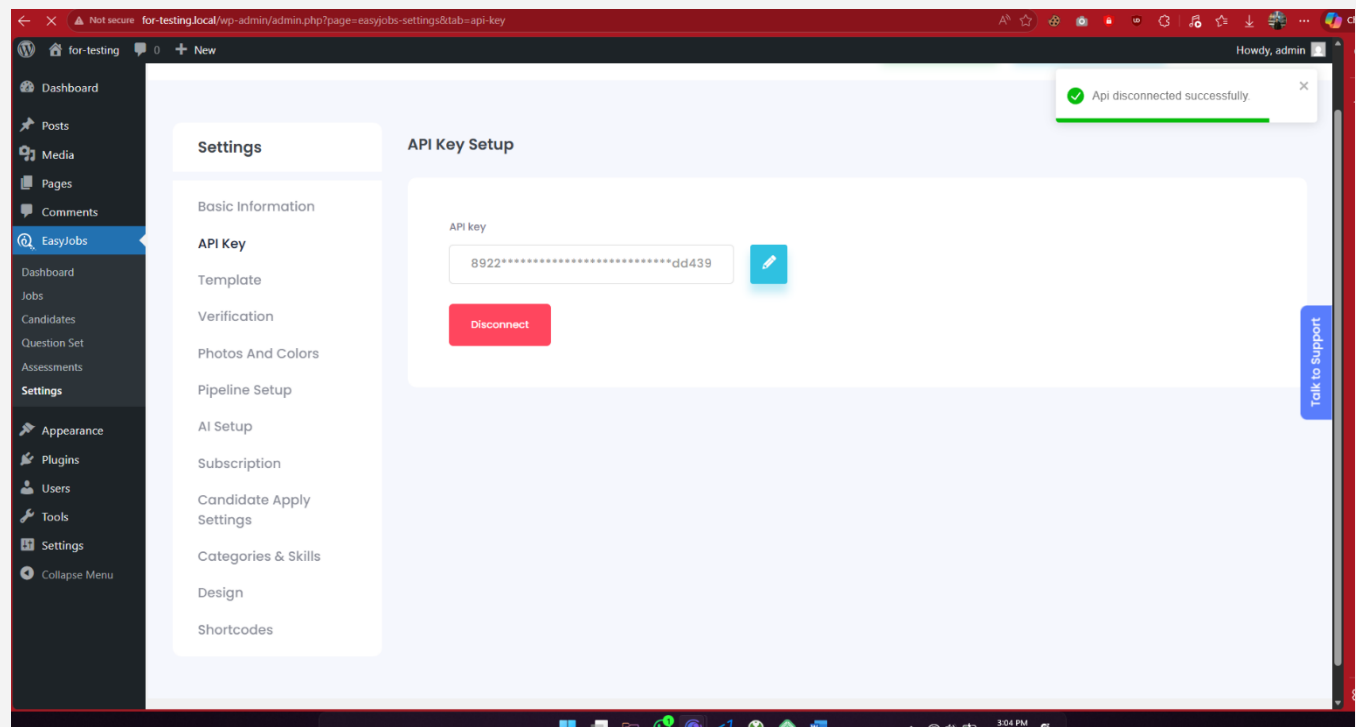

TC-005 — Invalid API key shows error message	
Module	Authentication
Test Steps	1. EasyJobs > Settings 2. Enter fake key: abc123xyz 3. Click Connect
Expected Result	Error message shown. No crash. User stays on settings page.
Severity	Critical
Result	PASS
Actual Result	Entered a fake API key. The plugin rejected it and showed an error message. No crash occurred. The connection was not established.
Video Evidence	Paste YouTube link here: _____

TC-006 — Empty API key shows validation error	
Module	Authentication
Test Steps	1. EasyJobs > Settings 2. Leave API key field EMPTY 3. Click Connect
Expected Result	Validation error shown. System does not proceed with blank key.
Severity	High
Result	Fail
Actual Result	FAIL: Nothing happened when Connect was clicked with an empty field. No error message, no loading indicator, no feedback of any kind appeared.
Video Evidence	https://youtu.be/yVO3Jej1Kh0

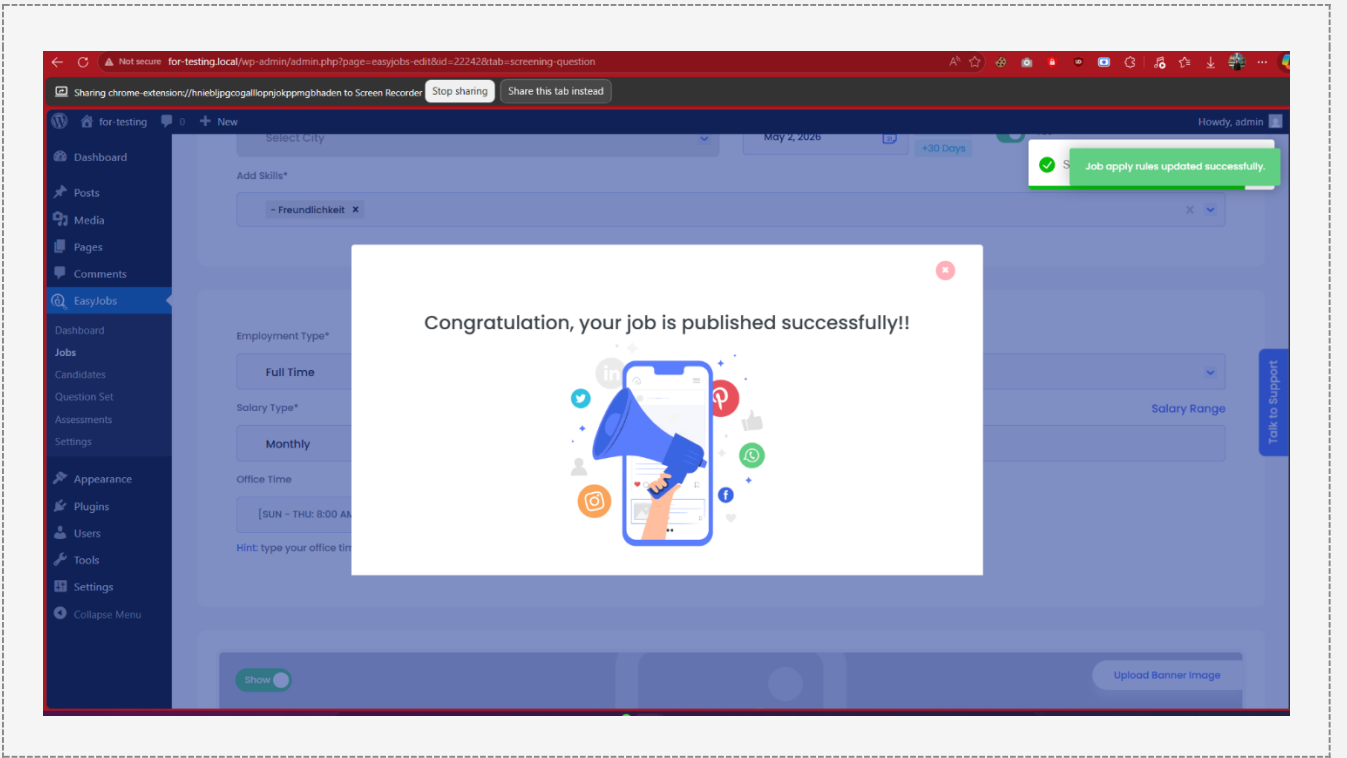

TC-007 — Disconnect API key works correctly	
Module	Authentication
Preconditions	Plugin connected to easy.jobs account.
Test Steps	1. Go to EasyJobs > Settings. 2. Click Disconnect. 3. Confirm disconnection.
Expected Result	Plugin disconnects. API key is cleared. Dashboard shows 'not connected' state.
Actual Result	Plugin disconnected successfully. The settings page returned to the empty API key input form.
Severity	High
Status	PASS
Video Evidence	https://youtu.be/OqL_dbAgZSA

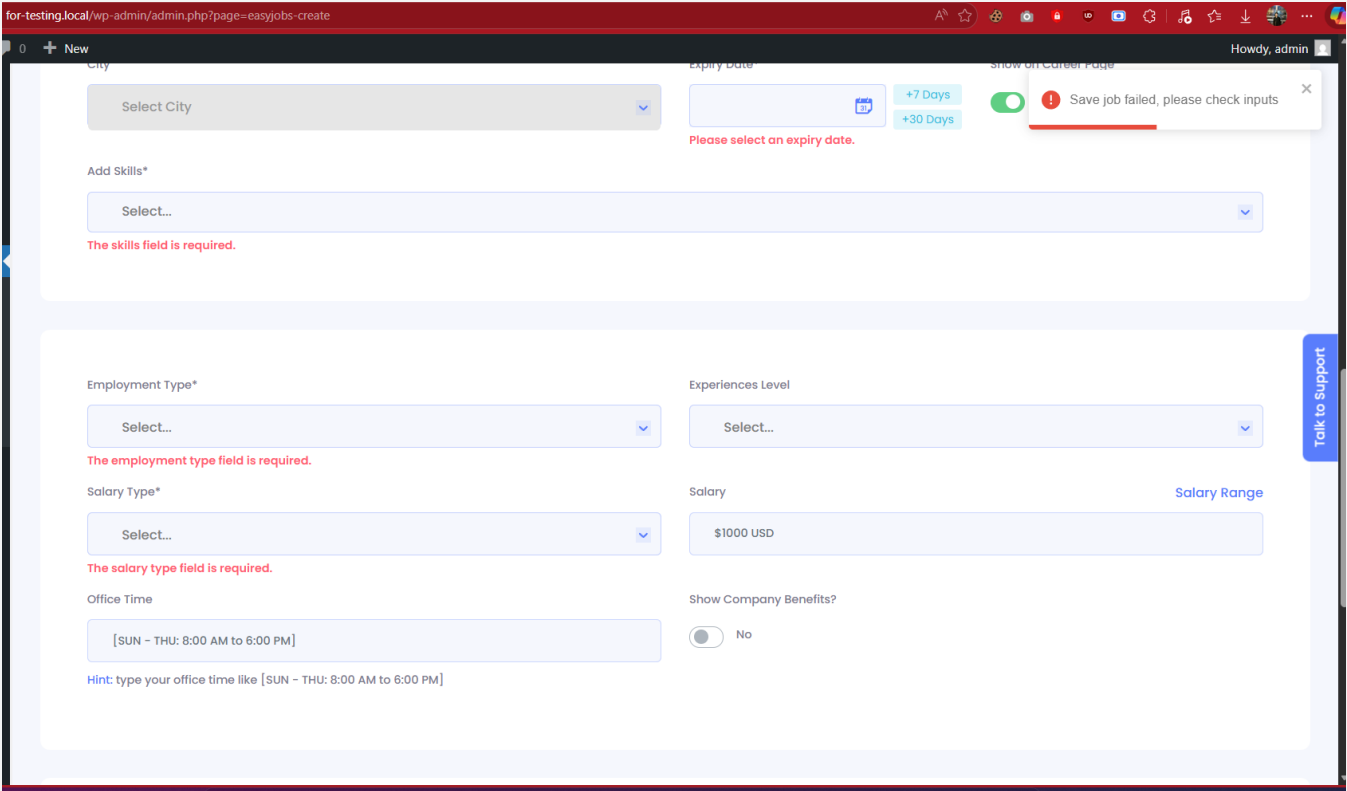

Module C: Job Management

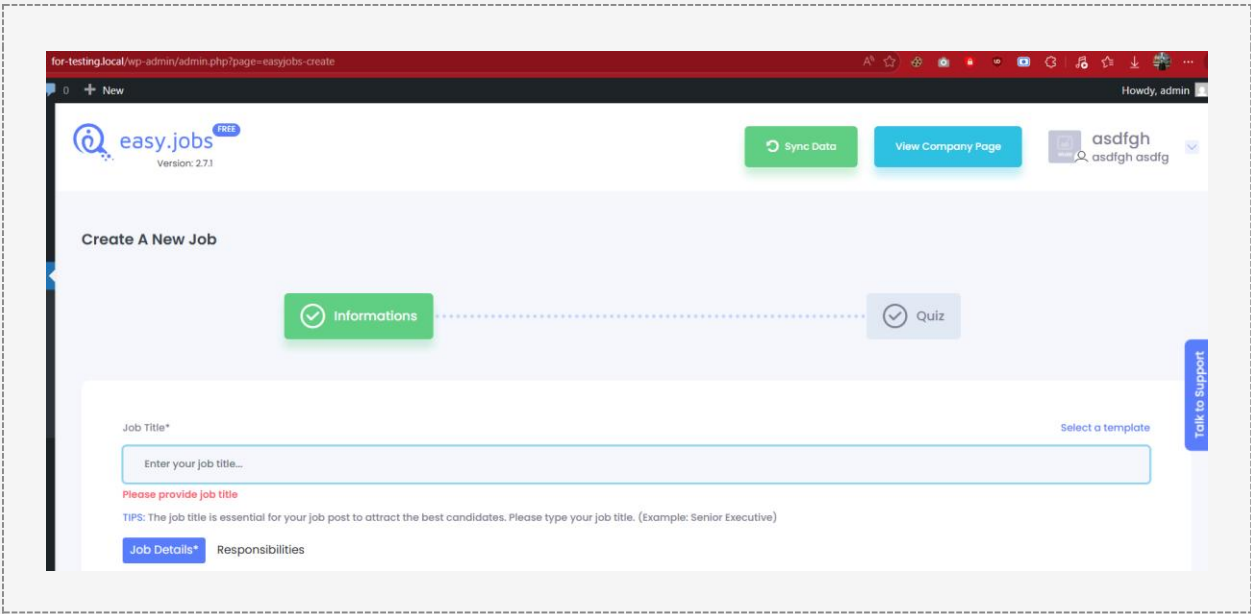

TC-008 — Create a new job with all required fields	
Module	Job Management
Test Steps	1. EasyJobs > Jobs > Add New 2. Fill: Title, Category, Type, Deadline, Description 3. Click Save/Publish
Expected Result	Job created successfully. Appears in job list.
Severity	Critical
Result	PASS
Actual Result	
Video Evidence	Paste YouTube link here: _____

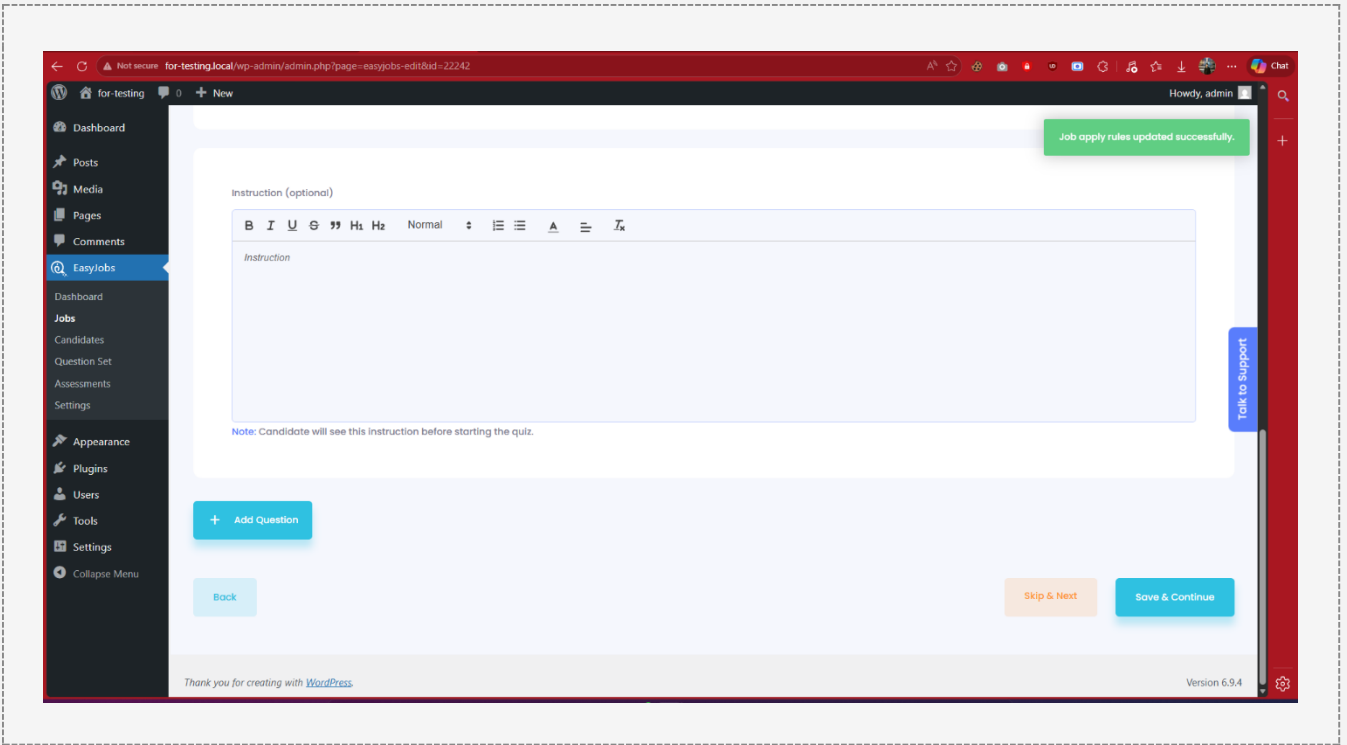

TC-009 — Create a job with missing required fields shows error	
Module	Job Management
Preconditions	Plugin connected to easy.jobs API.
Test Steps	1. Go to EasyJobs > Jobs > Add New. 2. Leave Job Title empty. 3. Click Save.
Expected Result	Validation error is shown next to the empty field. Job is NOT saved.
Actual Result	Validation error is shown next to the empty field. Job is NOT saved.
Severity	High
Status	PASS

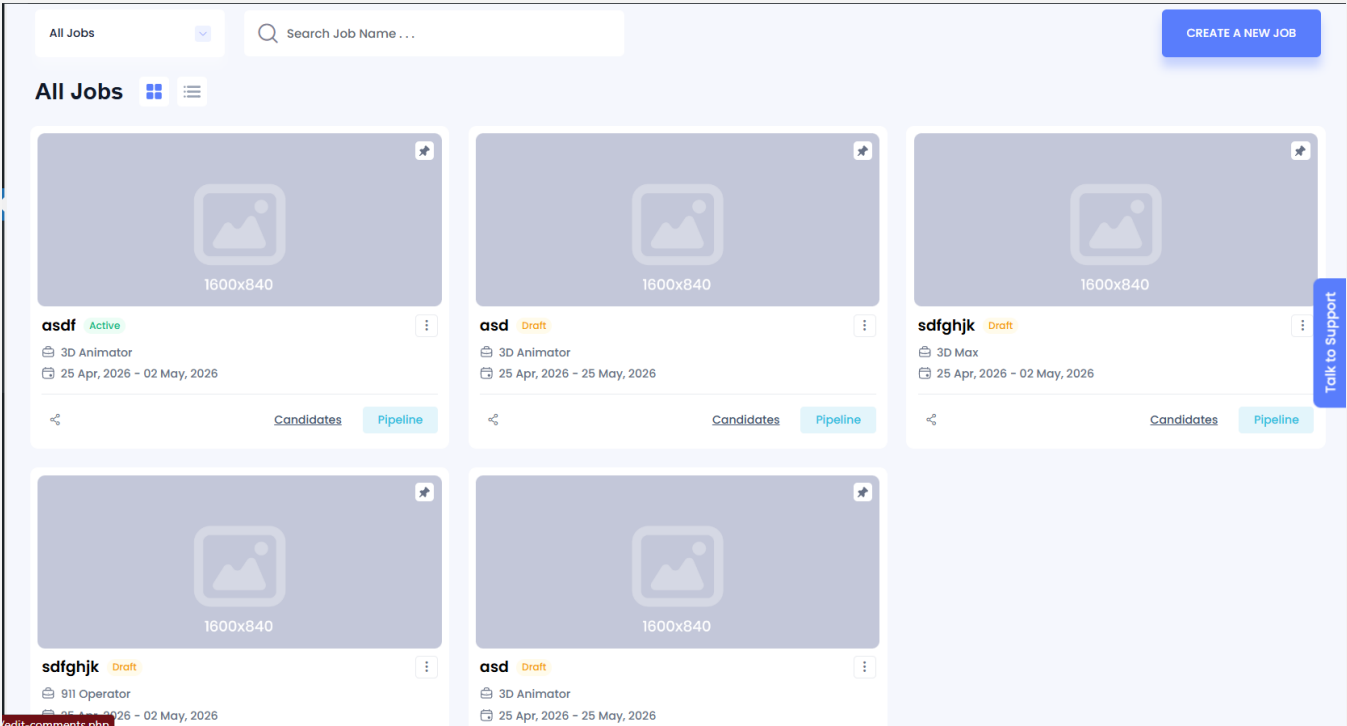

TC-010 — Create job with empty title shows validation error	
Module	Job Management
Preconditions	Plugin connected to easy.jobs API.
Test Steps	1. Go to EasyJobs > Jobs > Add New. 2. Leave Job Title empty. 3. Click Save.
Expected Result	Validation error is shown next to the empty field. Job is NOT saved.
Actual Result	Left the job title empty and clicked Save. Validation error appeared correctly next to the title field.
Severity	High
Status	PASS
Video Evidence	Paste YouTube link here:

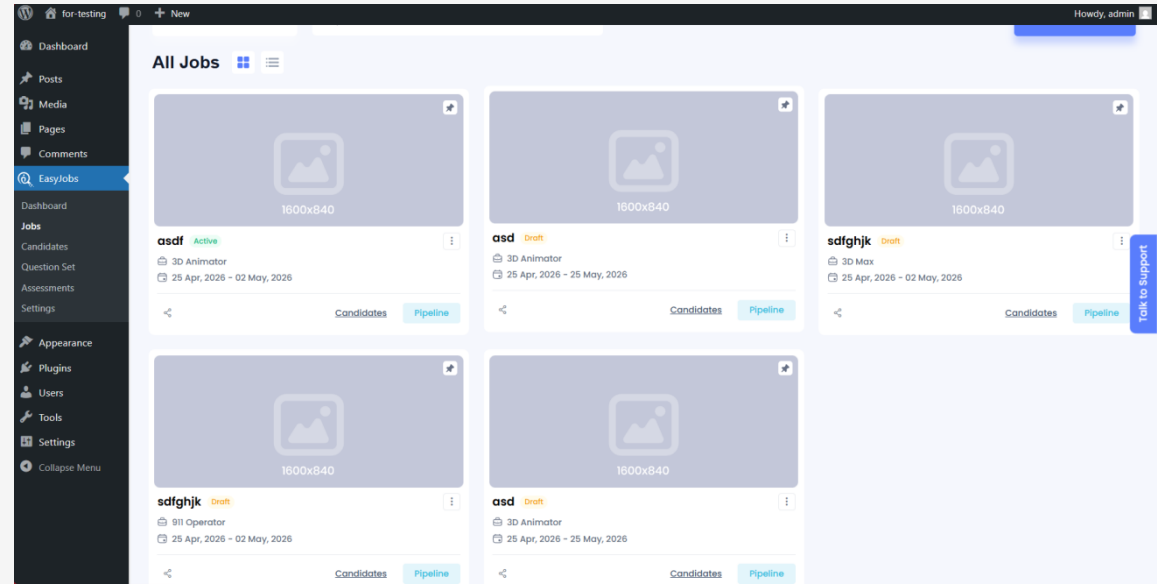

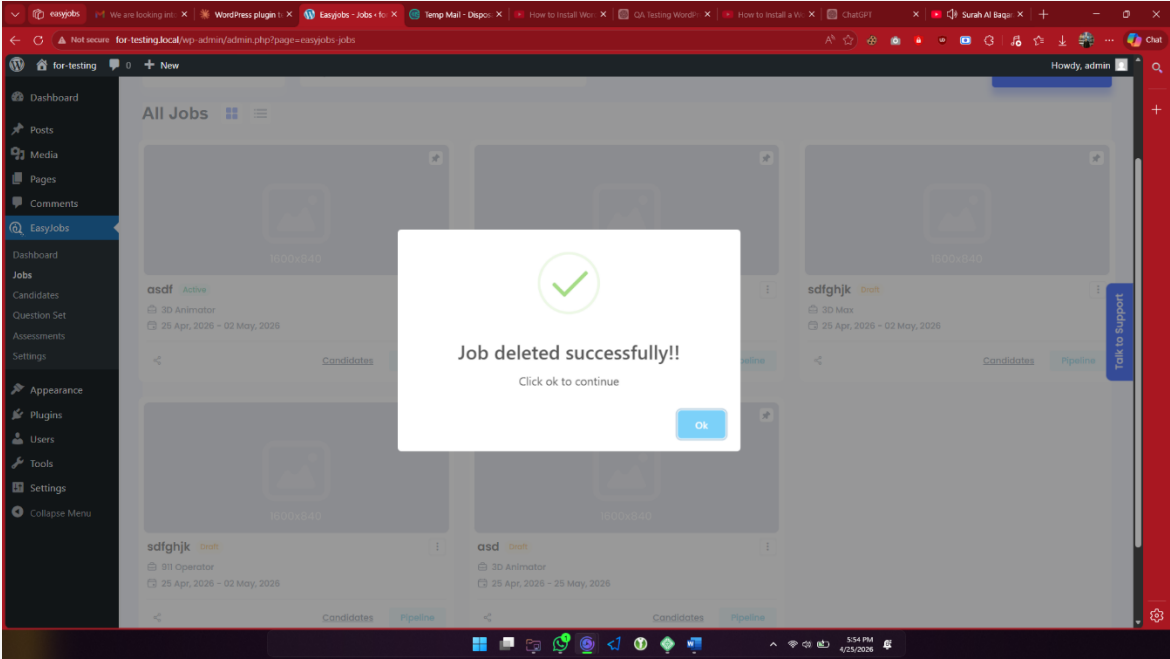

TC-011 — Edit an existing job and save changes	
Module	Job Management
Test Steps	1. EasyJobs > Jobs 2. Click Edit on a job 3. Change the title 4. Save
Expected Result	Updated title appears in the job list.
Severity	High
Result	PASS
Actual Result	Updated title appears in the job list.
Video Evidence	Paste YouTube link here:

TC-012 — Duplicate a job creates correct copy	
Module	Job Management
Preconditions	At least one job exists.
Test Steps	1. Go to EasyJobs > Jobs. 2. Click Duplicate on a job.
Expected Result	A copy of the job is created with same details. Copy shows as Draft status.
Actual Result	Duplicate created successfully. Copy appeared with Draft status in the list.
Severity	Medium
Status	PASS
Video Evidence	Paste YouTube link here:

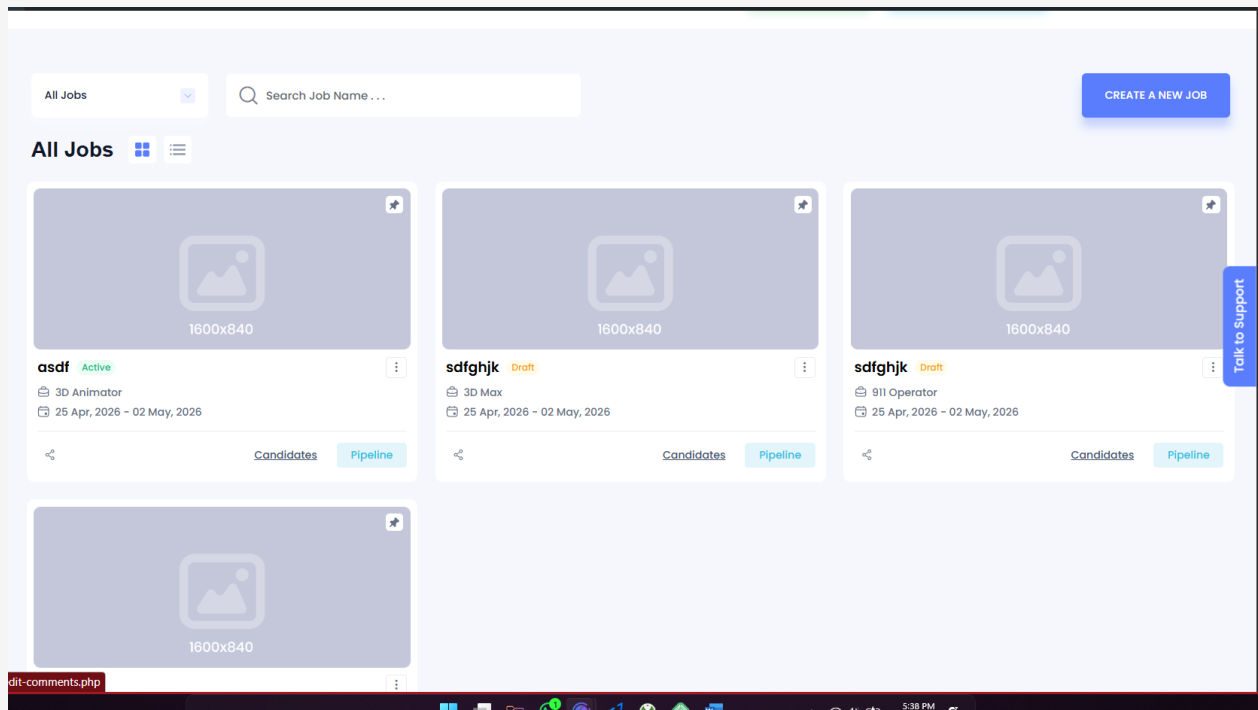

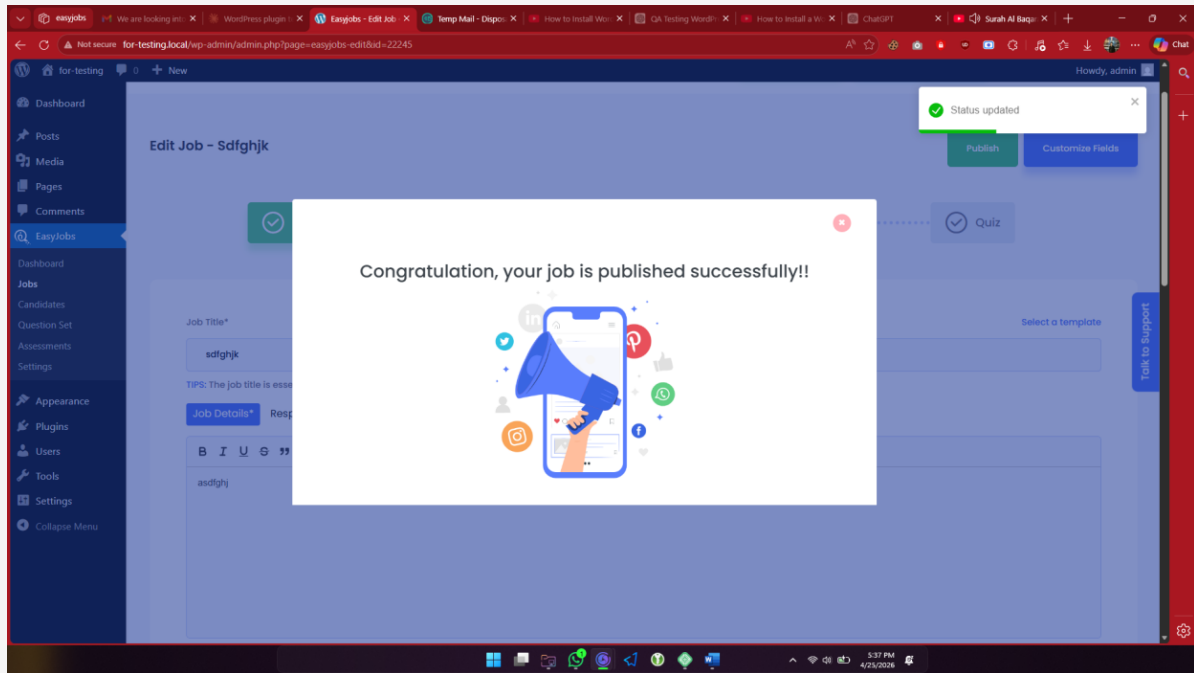

TC-013 — Delete a job removes it from the list	
Module	Job Management
Test Steps	1. EasyJobs > Jobs 2. Click Delete on a job 3. Confirm
Expected Result	Job disappears from the list after deletion.
Severity	High
Result	Fail
Actual Result	Validation error shown correctly next to the title field. Job was not saved.
Video Evidence	https://youtu.be/UokL4QhxF3k

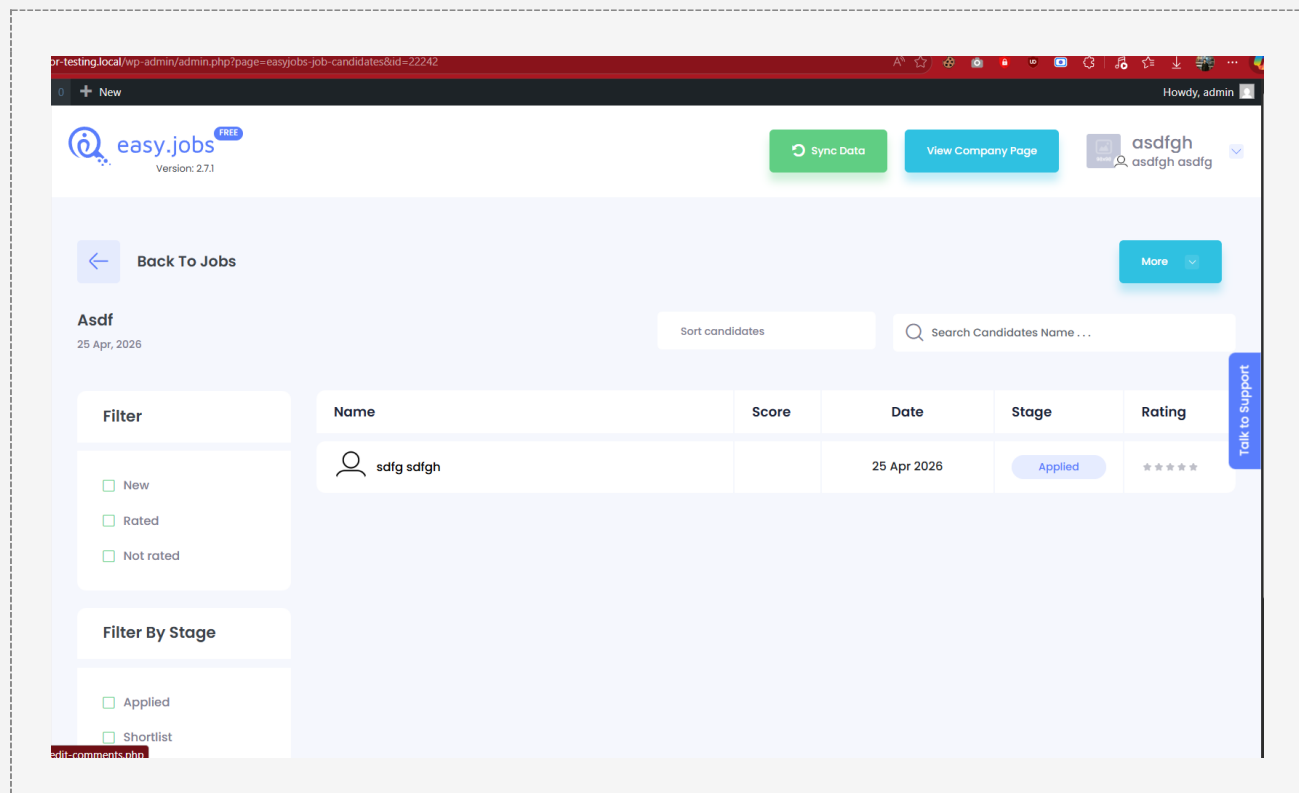

TC-014 — Change job status from Draft to Published	
Module	Job Management
Test Steps	1. Find a Draft job 2. Change status to Published 3. Save
Expected Result	Job now shows as Published in the list.
Severity	High
Result	FAIL

Actual Result	Updated the job title and clicked Save. The updated title appeared correctly in the job list.
Video Evidence	https://youtu.be/z3tfKUBNjxM

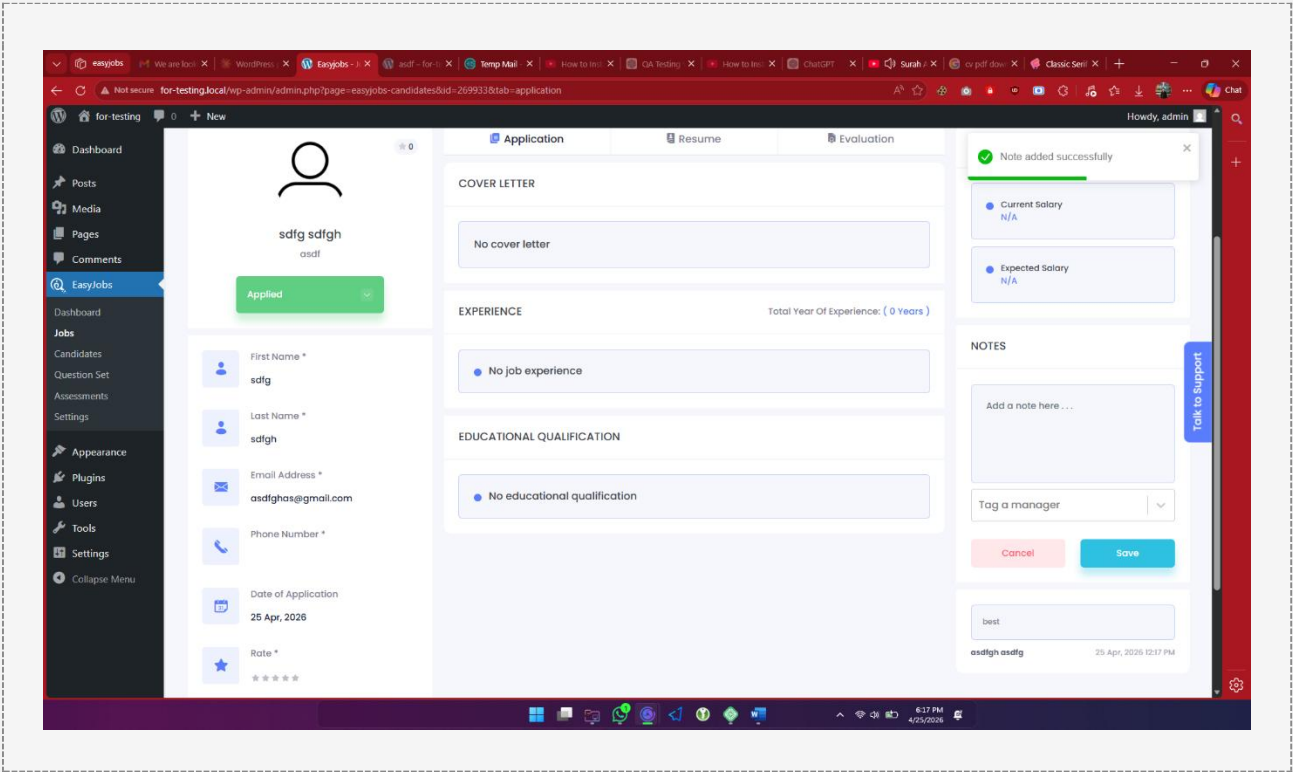

Module E: Candidate Management

TC-015 — Candidate list shows for a job	
Module	Candidates
Test Steps	1. EasyJobs > Jobs 2. Click on a job that has applications 3. View Candidates tab
Expected Result	Candidates shown with name and application date.
Severity	High
Result	PASS
Actual Result	Candidates shown with name and application date.
Video Evidence	Paste YouTube link here: _____

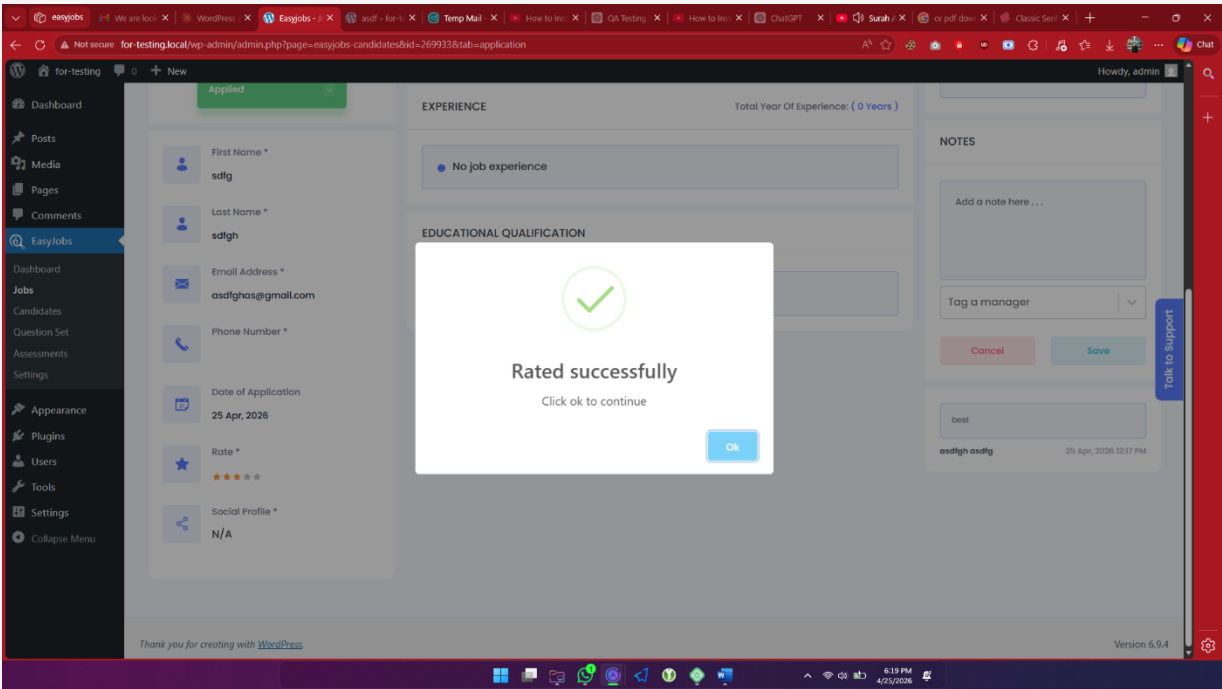

TC-016 — Add a note to a candidate profile	
Module	Candidates
Test Steps	1. Open a candidate profile 2. Click Add Note 3. Type a note 4. Save
Expected Result	Note saves and displays on the candidate profile.
Severity	Medium
Result	PASS
Actual Result	Note saves and displays on the candidate profile.

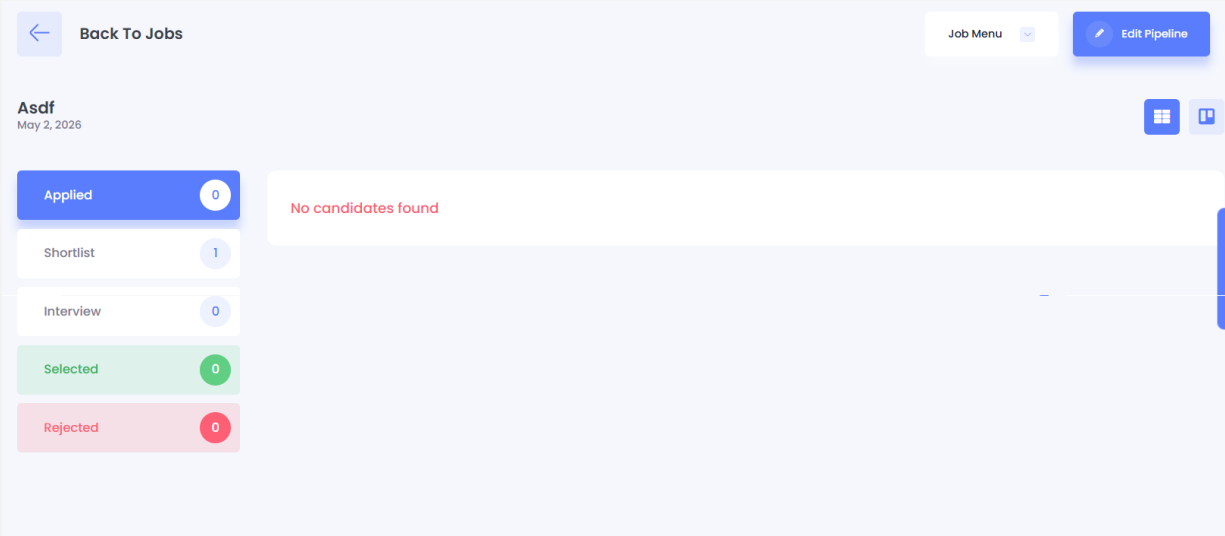

Video Evidence | Paste YouTube link here:

TC-017 — Rate a candidate saves the rating	
Module	Candidates
Test Steps	1. Open a candidate profile 2. Click stars to give a rating (e.g. 4 stars) 3. Save
Expected Result	Star rating saves and shows on candidate card.
Severity	Medium
Result	PASS
Actual Result	Set a star rating on the candidate profile. The rating saved and displayed correctly on the candidate card.
Video Evidence	https://youtu.be/ch1TT_9F_bw

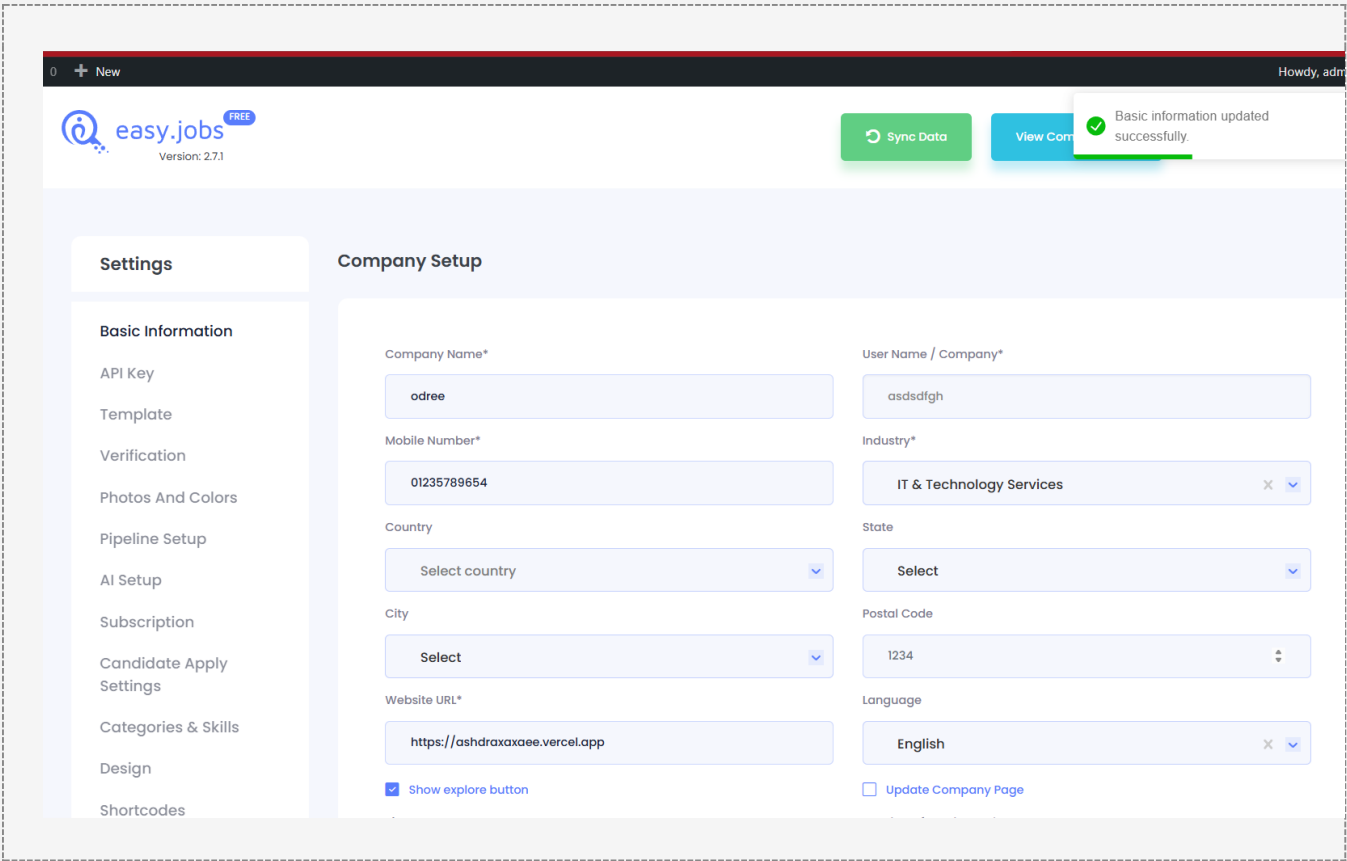

TC-018 — Moving candidate between pipeline stages works	
Module	Candidates / Pipeline
Preconditions	A candidate exists in the pipeline.
Test Steps	1. Go to a job's pipeline. 2. Drag a candidate from 'Applied' to 'Shortlisted'. 3. Check if change saves.
Expected Result	Candidate moves to the new pipeline stage and stays there after page refresh.
Actual Result	Candidate moves to the new pipeline stage and stays there after page refresh.
Severity	High
Status	PASS
Video Evidence	https://youtu.be/L1KtqmdRtTs

Module F: Settings

TC-019 — Company basic info saves correctly	
Module	Settings
Test Steps	1. EasyJobs > Settings > Basic Info 2. Update company name 3. Click Save
Expected Result	Success message shown. Company name updated.
Severity	Medium
Result	PASS
Actual Result	Success message shown. Company name updated.
Video Evidence	Paste YouTube link here:

TC-020 — Create a new pipeline stage	
Module	Settings / Pipeline
Test Steps	1. EasyJobs > Settings > Pipeline 2. Click Add New Stage 3. Enter name 4. Save
Expected Result	New stage appears in pipeline list.
Severity	Medium
Result	PASS
Actual Result	New stage appears in pipeline list.
Video Evidence	Paste YouTube link here:

Settings

01	Default	Applied >> Shortlist >> Interview >> Selected >> Rejected	Update
02	test	Applied >> Selected >> Rejected	Update Delete

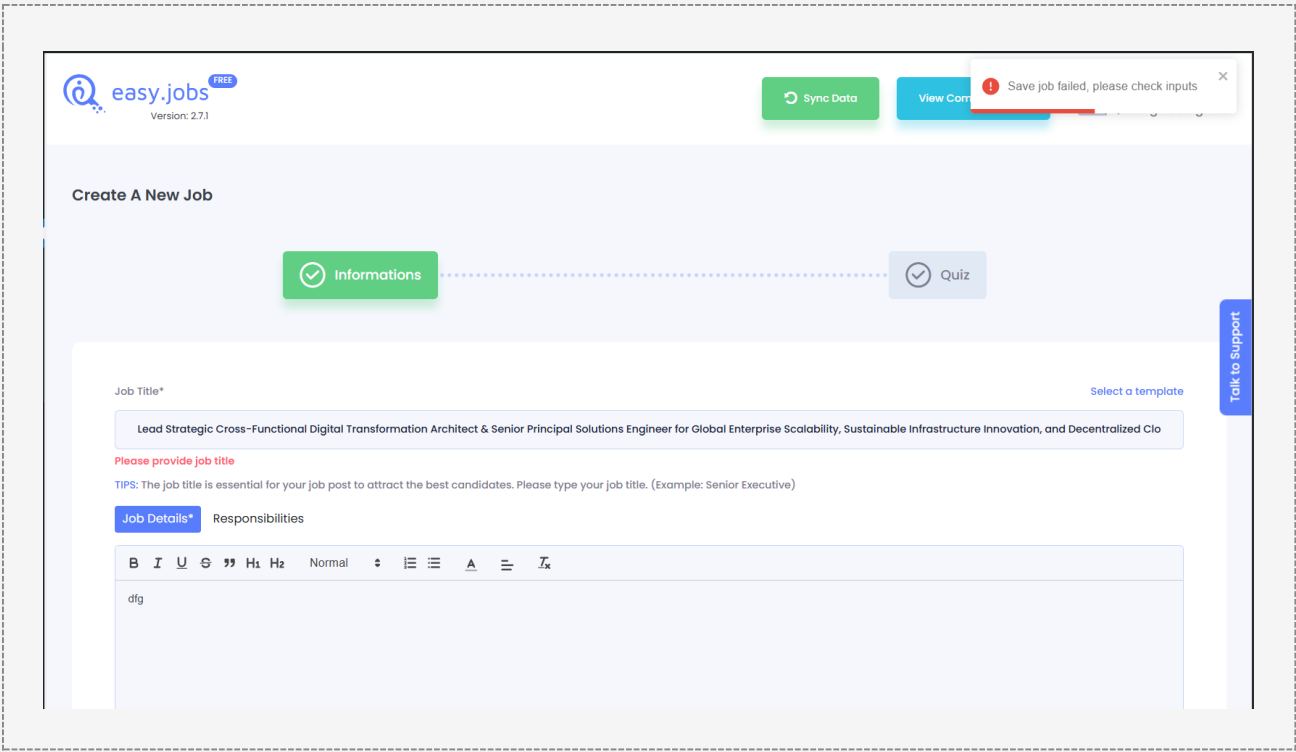

Thank you for creating with [WordPress](#). Version 6.9

Module G: Security & Edge Cases

TC-021 — Special characters in job title do not execute as code	
Module	Security / Edge Case
Test Steps	1. Create a job 2. Set title to: <script>alert('xss')</script> 3. Save 4. View on frontend
Expected Result	Title shows as plain text. NO popup appears. No broken layout.
Severity	Critical
Result	FAIL
Actual Result	The XSS script did NOT execute — no JavaScript popup appeared. However the error message shown was 'Please provide job title' which is misleading. The field was not empty.
Video Evidence	Paste YouTube link here:

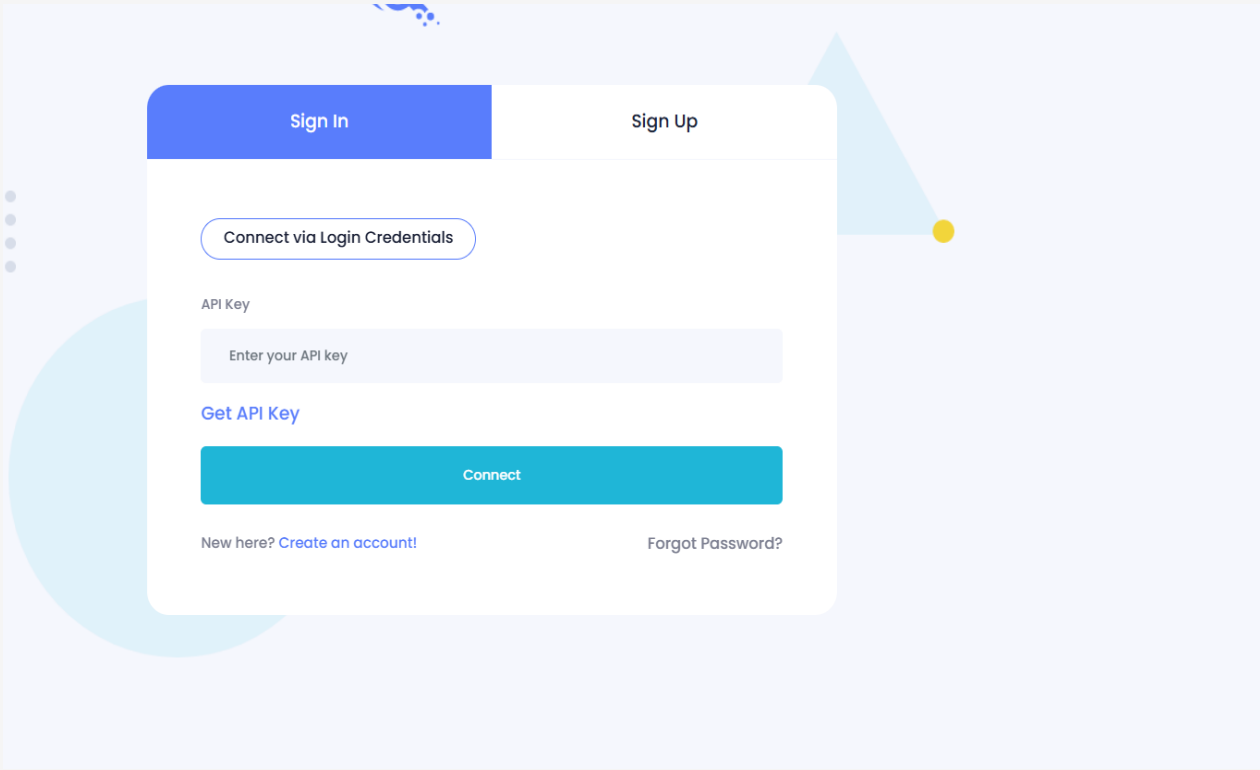

TC-022 — Very long job title does not break layout	
Module	Edge Case
Test Steps	1. Create a job with a 300-character long title 2. Save 3. View on frontend job list
Expected Result	Title wraps or truncates properly. Page layout does not break.
Severity	Medium
Result	FAIL
Actual Result	The long title is accepted in the input field with no character limit warning. When the user tries to save, the system shows: 'Please provide job title' — the same error as an empty field. The actual reason (title too long) is never communicated to the user. There is no character counter shown on the field.
Video Evidence	Paste YouTube link here:

3. Bug Reports

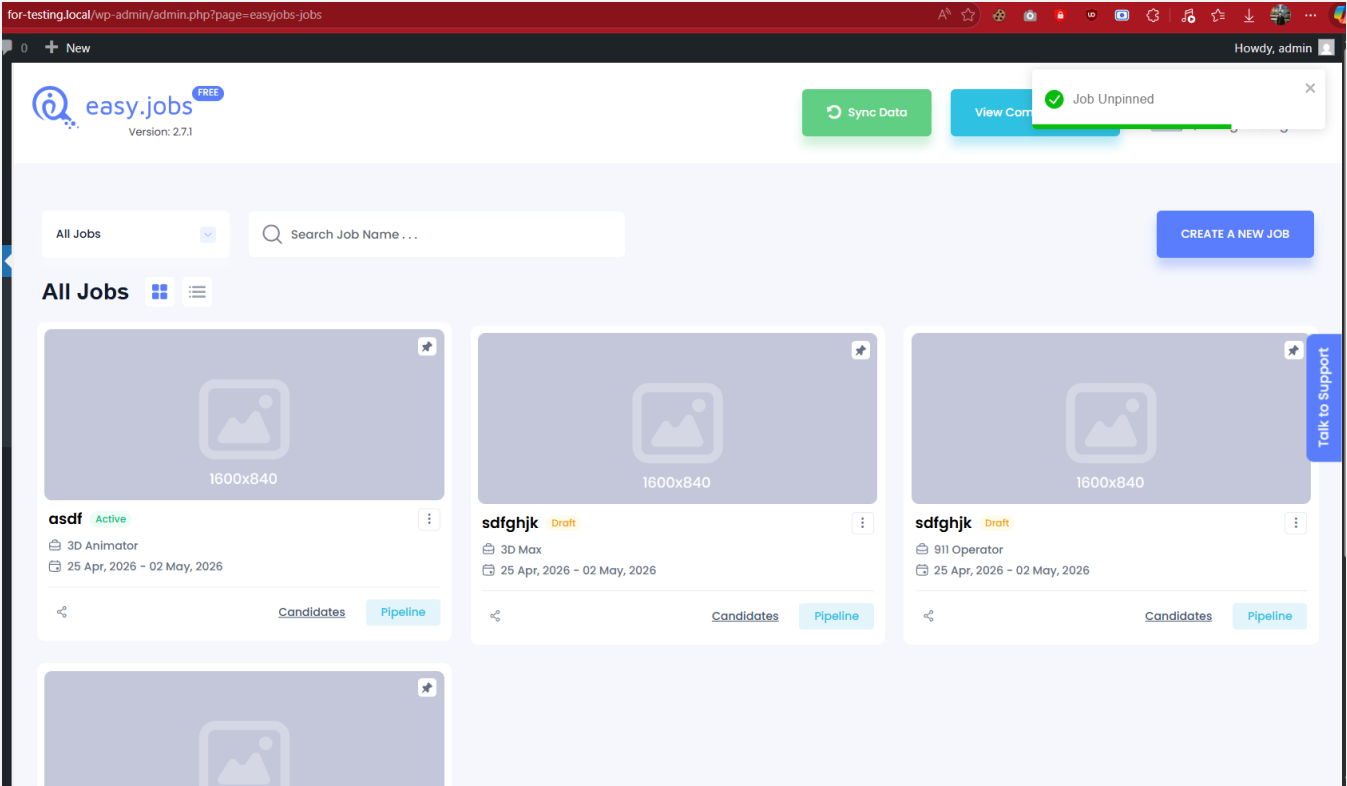

BUG-001 — No Validation Error When Connecting with Empty API Key	
Test Case	TC-006 — Empty API key shows validation error
Module	Authentication / Settings > API Key
Steps to Reproduce	1. Go to EasyJobs > Settings > API Key 2. Make sure the API key field is EMPTY (or clear it by clicking the edit pencil icon) 3. Click the Connect button
Expected Result	A validation error message should appear telling the user the API key cannot be empty. The system should NOT proceed.
Actual Result	Nothing happens. No error message is shown. No feedback is given to the user. The button appears to do nothing when clicked with an empty field.
Severity	High
Test Result	FAIL
Impact / Risk	Users get no feedback when they forget to enter an API key. They will be confused thinking the button is broken or the plugin is not working. This is a missing validation that hurts user experience significantly.
Suggestion / Fix	Add client-side validation: before making any API call, check if the API key field is empty. If empty, show a red error message: 'API key is required. Please enter your API key.' Do not allow the Connect button to proceed with an empty value.

Tested On	WordPress 6.9.4 easy.jobs Plugin v2.7.1 Environment: LocalWP (localhost) Date: April 24, 2026
Video Evidence	https://youtu.be/yVO3Jei1Kh0

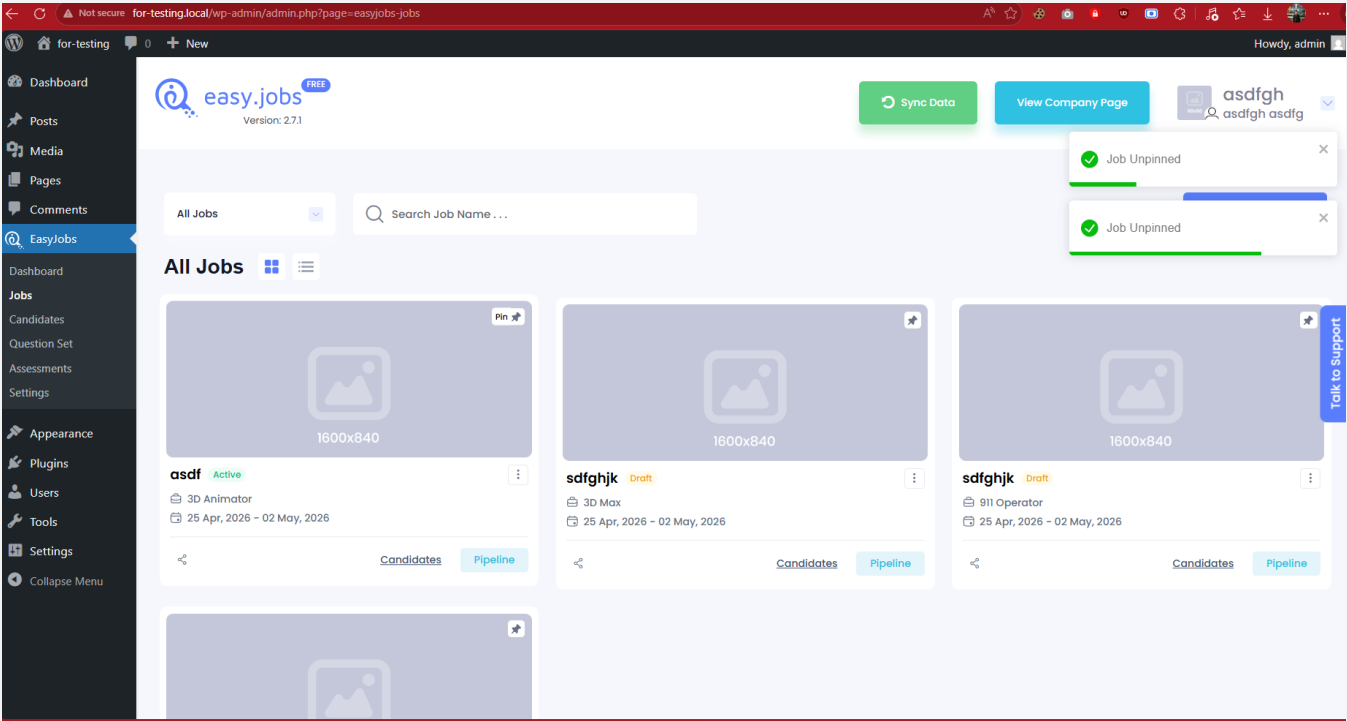

BUG-002 — Pin Icon Remains Visible on Job Card After Unpinning	
Test Case	TC-012 — Pin / Unpin a job works correctly
Module	Job Management — Jobs List
Steps to Reproduce	1. Go to EasyJobs > Jobs 2. Find a job that is currently Pinned (pin icon is filled/highlighted) 3. Click the Pin icon to Unpin it 4. Observe the job card after the action
Expected Result	After unpinning, the Pin icon should be removed or change to an empty/outline state to clearly show the job is no longer pinned.
Actual Result	The pin icon remains visible and filled on the job card even after unpinning. The UI does not update to reflect the unpinned state — the icon looks the same as before clicking.
Severity	Medium
Test Result	FAIL

Impact / Risk	Users cannot visually tell if a job is pinned or unpinned. The pin button gives no visual feedback after clicking. This causes confusion — the user may click the button multiple times thinking it did not work.
Suggestion / Fix	After a successful unpin action, update the pin icon state immediately (UI should refresh or toggle the icon style). The filled pin icon should become an empty/outline icon when unpinned.
Tested On	WordPress 6.9.4 easy.jobs v2.7.1 LocalWP April 25, 2026
Video Evidence	Paste YouTube link here:

BUG-003 — Incorrect Popup Message Shown When Pinning a Job (Shows 'Unpinned' Instead of 'Pinned')	
Test Case	TC-012 — Pin / Unpin a job works correctly
Module	Job Management — Toast Notifications
Steps to Reproduce	1. Go to EasyJobs > Jobs 2. Click the Pin icon on a job to Unpin it — first popup appears saying 'Job Unpinned' 3. Immediately click the Pin icon again to Pin it back 4. Observe the second popup notification message
Expected Result	First click (Unpin): popup should say 'Job Unpinned' Second click (Pin): popup should say 'Job Pinned' The message must match the actual action performed.
Actual Result	Both popups show 'Job Unpinned' — even when the second click was a Pin action. The notification message is incorrect for the Pin action. As seen in the screenshot, two 'Job Unpinned' messages appeared at the same time.

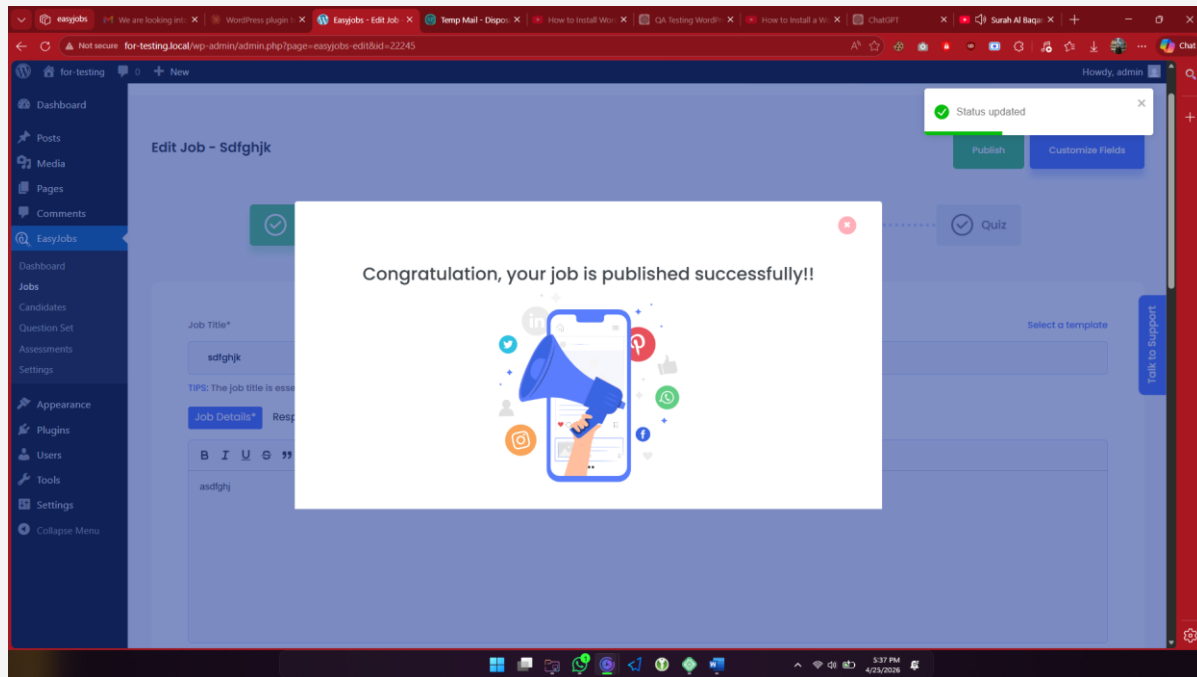

Severity	High
Test Result	FAIL
Impact / Risk	The toast notification is giving wrong information to the user. When a user pins a job, they are told it was 'Unpinned' — this is misleading and confusing. The user cannot trust the system feedback, which breaks trust in the plugin.
Suggestion / Fix	Fix the notification logic to send the correct message based on the current action: use 'Job Pinned' when pinning and 'Job Unpinned' when unpinning. The message should be dynamic based on the toggle state, not hardcoded.
Tested On	WordPress 6.9.4 easy.jobs v2.7.1 LocalWP April 25, 2026
Video Evidence	Paste YouTube link here:

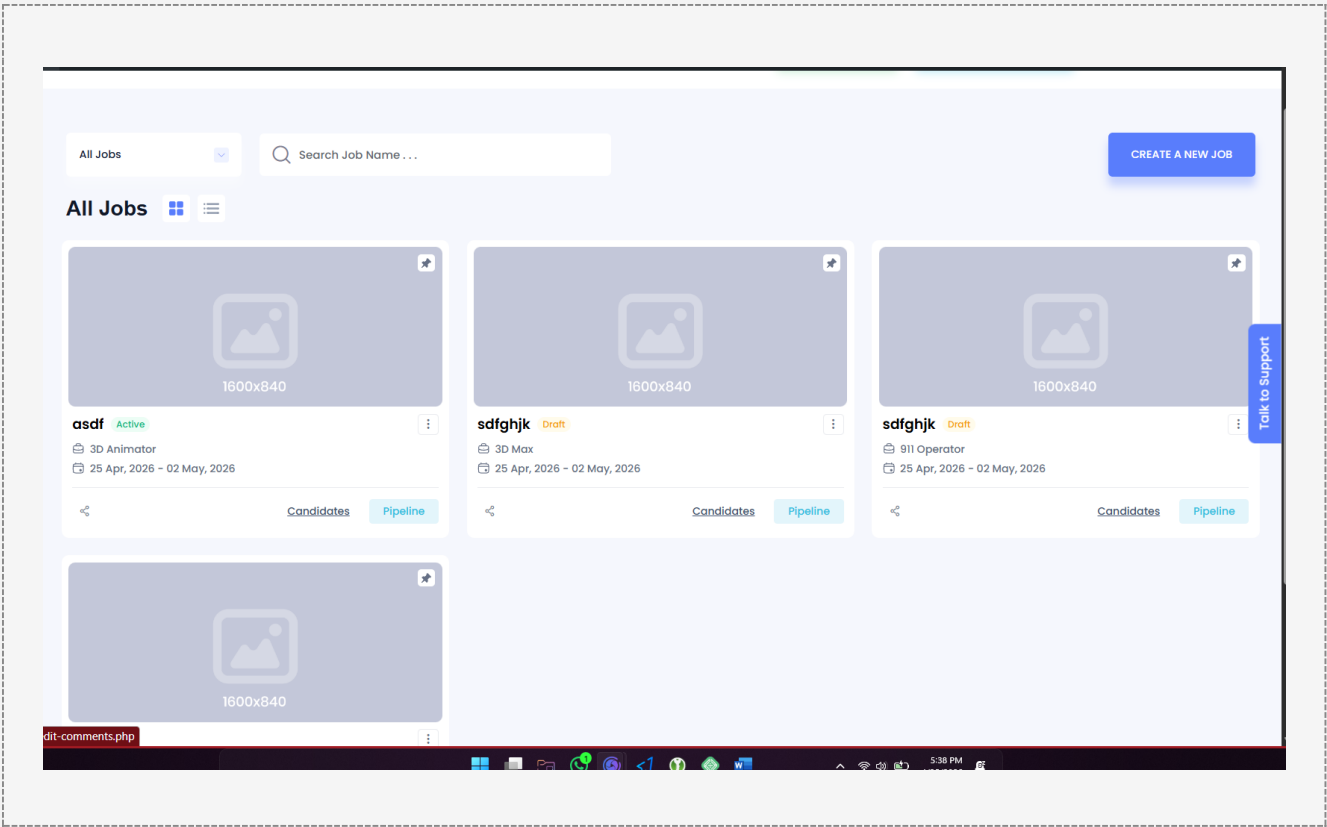

Test Case: TC-011 (Change job status Draft to Published) | Date: April 25, 2026

BUG-004 — Job Status Remains 'Draft' After Successful Publish Confirmation	
Test Case	TC-013 — Change job status from Draft to Published
Module	Job Management — Job Status / Publishing
Steps to Reproduce	1. Go to EasyJobs > Jobs 2. Open a job that has 'Draft' status 3. Click the 'Publish' button at the top right 4. A popup appears saying 'Congratulation, your job is published successfully!!' 5. Close the popup 6. Go back to EasyJobs > Jobs list and observe the job status badge
Expected Result	After clicking Publish and seeing the success popup, the job status should change from 'Draft' to 'Active' in the jobs list. The status badge should update immediately.

Actual Result	The system shows a success popup: 'Congratulation, your job is published successfully!!' — but when checking the jobs list, the job status badge still shows 'Draft' instead of 'Active'. The status did NOT update in the UI despite the success message.
Severity	Critical
Test Result	FAIL
Impact / Risk	This is a Critical bug because it creates a false success — the system tells the user the job was published, but the status shows Draft. The user cannot trust whether the job is actually published or not. Job seekers may not see the job on the frontend even though admin thinks it is published. This directly affects the core purpose of the plugin.
Suggestion / Fix	After a successful publish API response, the job status in the UI must be updated immediately to 'Active'. Either refresh the jobs list automatically after publish, or update the status badge in real time without requiring a page reload.
Tested On	WordPress 6.9.4 easy.jobs v2.7.1 LocalWP (localhost) April 25, 2026
Video Evidence	https://youtu.be/z3tfKUBNjxM

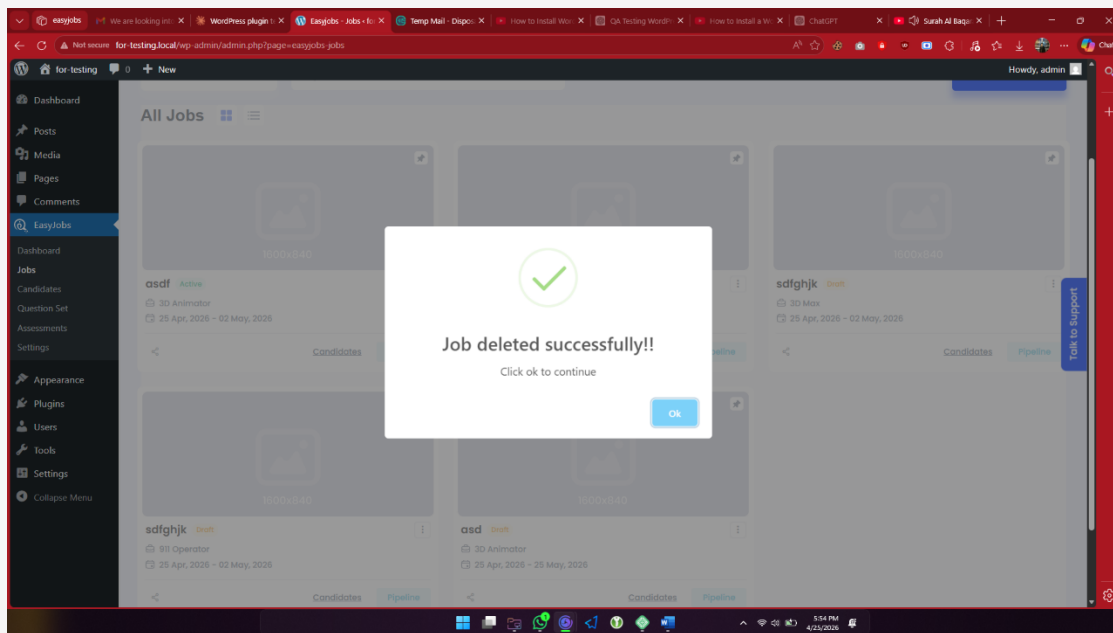

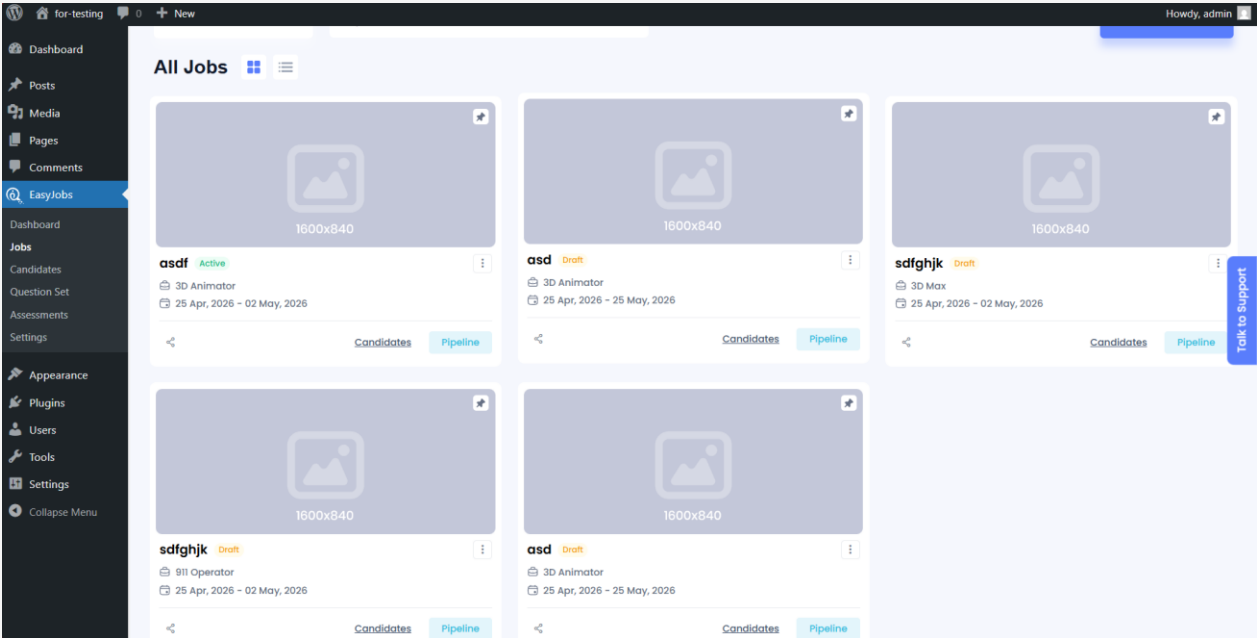

Test Case: TC-010 (Delete a job removes it from the list) | Date: April 25, 2026

BUG-005 — Deleted Job Still Appears in Jobs List After Successful Delete Confirmation	
Test Case	TC-012 — Delete a job removes it from the list
Module	Job Management — Delete Job
Steps to Reproduce	1. Go to EasyJobs > Jobs 2. Click the 3-dot menu (:) on any job card 3. Click Delete 4. A popup appears saying 'Job deleted successfully!! Click ok to continue' 5. Click Ok 6. Observe the jobs list — check if the deleted job is gone
Expected Result	After clicking Ok on the delete confirmation popup, the deleted job should immediately disappear from the jobs list. The total job count should decrease by 1.
Actual Result	The system shows a success popup: 'Job deleted successfully!! Click ok to continue' — but after clicking Ok, the deleted job is still visible in the jobs list. The UI does not update. The job appears to still exist even though the system confirmed deletion.
Severity	Critical
Test Result	FAIL
Impact / Risk	This is a Critical bug — it is the same false success pattern as BUG-007 (Publish). The system confirms success but the UI does not reflect the change. Admin users cannot tell if the deletion actually worked. They may delete the same job multiple times thinking the first attempt failed. This creates confusion and distrust in the plugin's reliability.

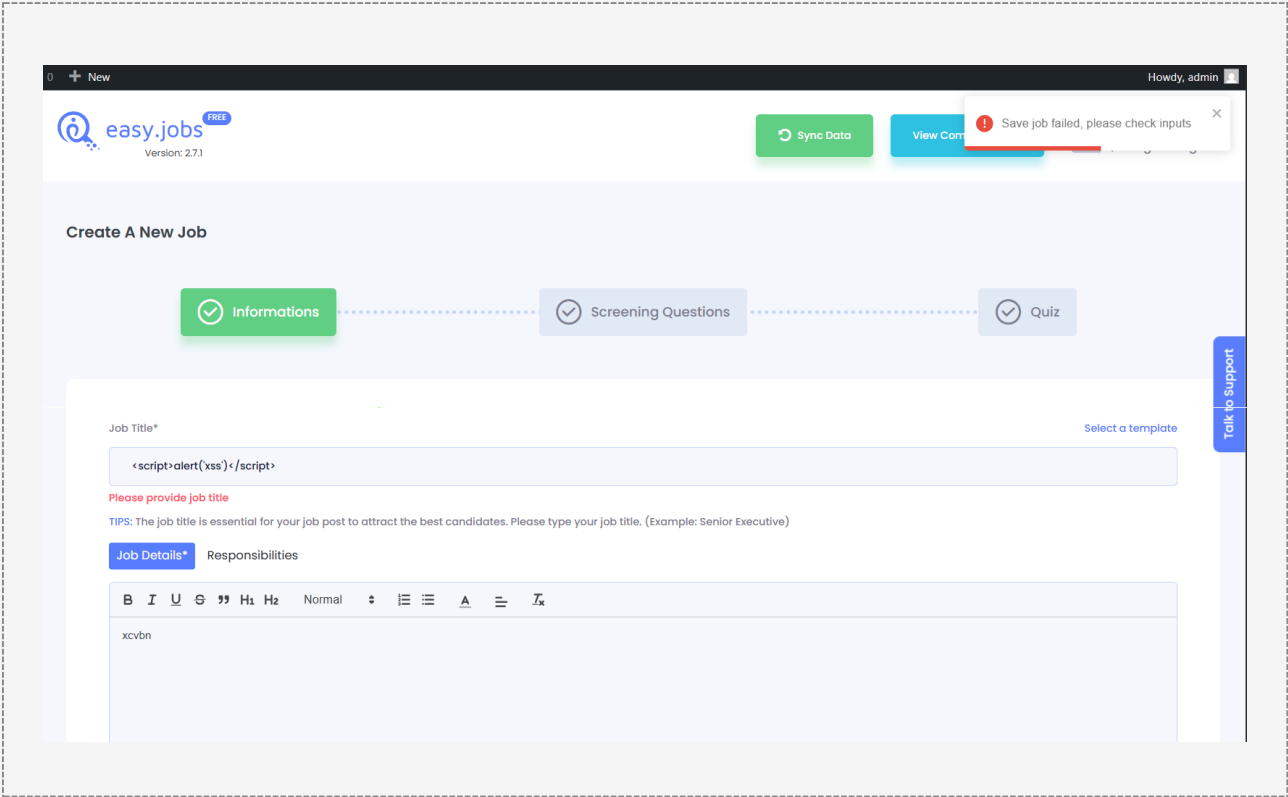

Related Bug	Similar pattern to BUG-007 — Job status not updated after Publish. Both bugs suggest the UI is not refreshing after API success responses. Root cause is likely the same: the jobs list component does not re-fetch or update state after a successful API call.
Suggestion / Fix	After a successful delete API response, remove the job card from the UI immediately without requiring a full page reload. Either: (1) Remove the card from the DOM directly, or (2) Refresh the jobs list automatically after the Ok button is clicked in the confirmation popup.
Tested On	WordPress 6.9.4 easy.jobs v2.7.1 LocalWP (localhost) April 25, 2026
Video Evidence	https://youtu.be/UokL4QhxF3k

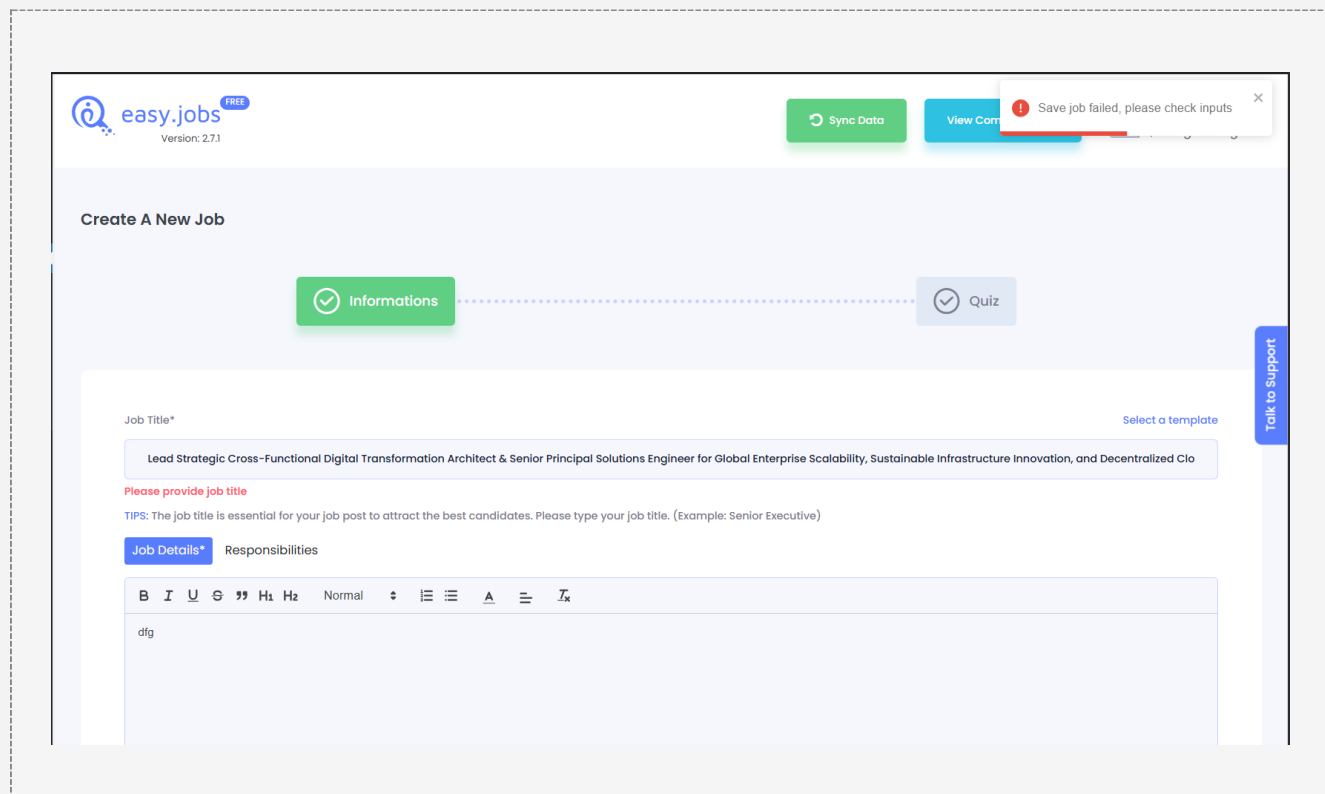

BUG-006 — Misleading Validation Error Message When Script Tag Entered in Job Title	
Test Case	TC-020 — Special characters in job title do not break the system
Module	Security / Job Creation — Input Validation
Steps to Reproduce	1. Go to EasyJobs > Jobs > Create A New Job 2. In the Job Title field, type: <code><script>alert('xss')</script></code> 3. Fill in Job Details with any text 4. Click Save / Next 5. Observe the error message shown
Security Result (Good)	The XSS script did NOT execute. No JavaScript alert popup appeared. The plugin correctly rejected the script tag input. This is correct security behavior.
Bug Found — Actual Result	When the script tag is rejected, the error message shown is: 'Please provide job title' — as if the title field is completely EMPTY. But the field is NOT empty — it contains text (the script tag). The error message is misleading and confusing. The correct message should explain WHY the input was rejected, e.g. 'Job title contains invalid characters. Please use plain text only.'
Severity	Medium
Test Result	PARTIAL FAIL
Impact / Risk	A normal user who accidentally types special characters like < > in a job title will see 'Please provide job title' and think the field is empty — they will be confused why their text is not accepted. The error gives no guidance on what is wrong or how to fix it. This hurts usability and user trust.
Suggestion / Fix	When input is rejected due to invalid/unsafe characters, show a specific error message such as: 'Job title contains invalid characters (< > are not allowed). Please

	use plain text only.' This gives the user clear, actionable guidance instead of a misleading empty-field error.
Tested On	WordPress 6.9.4 easy.jobs v2.7.1 LocalWP (localhost) April 25, 2026
Video Evidence	Paste YouTube link here:

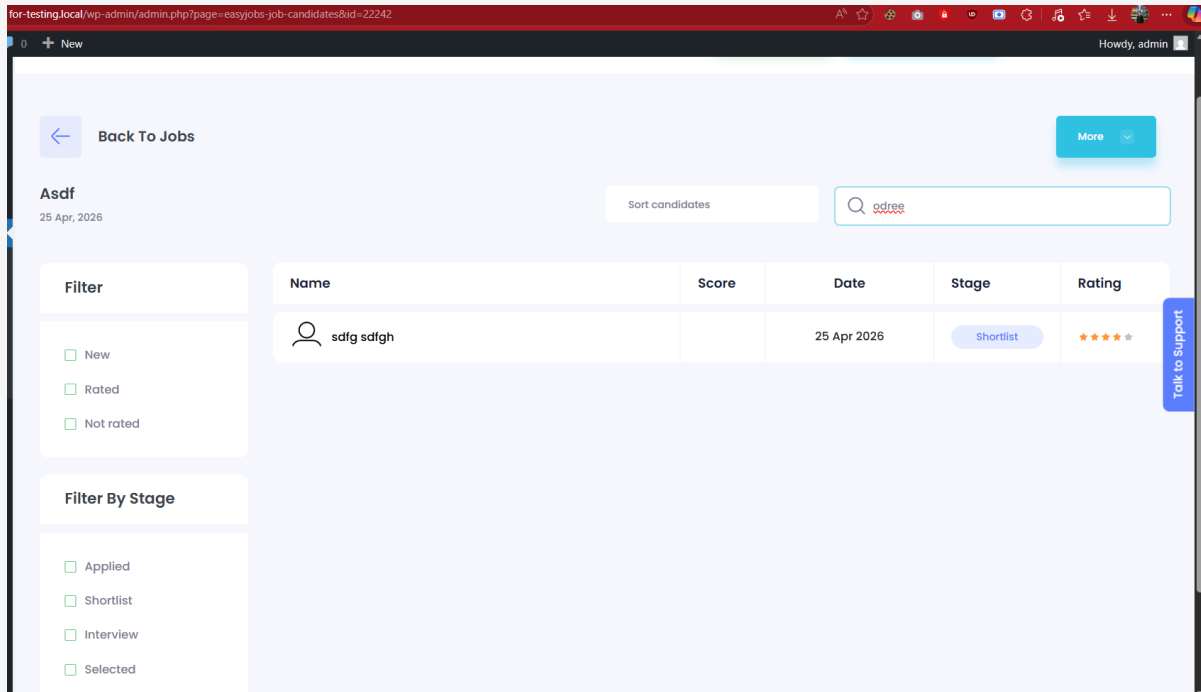

BUG-007 — Very Long Job Title Silently Rejected with Misleading 'Please provide job title' Error	
Test Case	TC-021 — Very long job title does not break layout
Module	Edge Case / Job Creation — Input Validation
Steps to Reproduce	1. Go to EasyJobs > Jobs > Create A New Job 2. In the Job Title field, paste a very long title of 300+ characters (e.g. 'Lead Strategic Cross-Functional Digital Transformation Architect & Senior Principal Solutions Engineer for Global Enterprise Scalability, Sustainable Infrastructure Innovation...') 3. Fill in Job Details with any text 4. Click Save / Next 5. Observe the error message shown
Expected Result	One of the following should happen: (A) The input field should prevent typing beyond the character limit (e.g. maxlength attribute), OR (B) A clear error should be shown: 'Job title is too long. Maximum 100 characters allowed.' The layout should not break and the user should know exactly what the limit is.
Actual Result	The long title is accepted in the input field with no character limit warning. When the user tries to save, the system shows: 'Please provide job title' — the same error as

	an empty field. The actual reason (title too long) is never communicated to the user. There is no character counter shown on the field.
Severity	High
Test Result	FAIL
Two Problems Found	Problem 1 — No character limit enforced on the input field: The user can type unlimited characters with no warning or counter shown. Problem 2 — Wrong error message: When the long title is rejected, the error says 'Please provide job title' instead of explaining the title is too long. This is the same misleading message pattern as BUG-009.
Impact / Risk	A recruiter writing a detailed job title will have no idea their title is too long until they try to save. Then they receive a confusing error message. They may waste time re-typing the title without understanding the character limit. This is a bad user experience that makes the plugin feel broken.
Suggestion / Fix	1. Add a character counter below the Job Title field (e.g. '45 / 100 characters'). 2. Add a maxlength attribute to the input field to stop users typing beyond the limit. 3. If the limit is exceeded during save, show a specific error: 'Job title is too long. Please keep it under 100 characters.'
Related Bug	BUG-009 — Same misleading 'Please provide job title' error shown for invalid characters. Both bugs share the same broken error message system.
Tested On	WordPress 6.9.4 easy.jobs v2.7.1 LocalWP (localhost) April 25, 2026
Video Evidence	Paste YouTube link here:

BUG-008 — Candidate Search Button Shows Nothing & Enter Key Causes Blank White Screen	
Test Case	TC-022 — Candidate search filter works
Module	Candidates — Search Functionality
Steps to Reproduce — Problem 1 (Search Button)	1. Go to EasyJobs > Candidates 2. Type a candidate name in the Search box 3. Click the Search button (magnifier icon) 4. Observe the result
Steps to Reproduce — Problem 2 (Enter Key — Critical)	1. Go to EasyJobs > Candidates 2. Type any candidate name in the Search box 3. Press the Enter key on keyboard 4. Observe what happens to the page
Expected Result	Both clicking Search button AND pressing Enter should: - Show matching candidates if found, OR - Show a 'No candidates found' message if no match exists. The page should NEVER go blank or crash under any input.
Actual Result — Problem 1	Clicking the Search button shows no results and no feedback at all. The page stays the same. No loading indicator, no error, no 'no results' message. Complete silent failure — user has no idea if search worked or not.
Actual Result — Problem 2 (Critical)	Pressing Enter on the search box causes the entire WordPress admin page to go completely blank — a fully white screen with nothing on it. The URL changes to: for-testing.local/wp-admin/admin.php? (with empty query). The entire admin panel content disappears. User must press Back or navigate away to recover.
Severity	Critical
Test Result	FAIL
Impact / Risk	Problem 1: Any recruiter trying to find a specific candidate by name gets no results and no explanation — they cannot search effectively. Problem 2 (Critical): Pressing Enter — the most natural keyboard action when searching — crashes the admin panel completely. This is a crash-level bug. A non-technical user may think WordPress is broken and panic. They cannot use the admin panel until they navigate away manually.
Root Cause (Likely)	Problem 2 is likely caused by the Enter key submitting a form with no action defined, causing WordPress to load admin.php with an empty/undefined page parameter — resulting in a blank page. The search form is missing both proper form submission handling and keyboard event prevention.
Suggestion / Fix	1. Fix the Search button to properly trigger the search API and display results or a 'No results found' message. 2. Add an event listener to prevent the default Enter key form submission behavior (preventDefault) and instead trigger the search function. 3. Add a loading spinner while search is running so users know the action was received.
Tested On	WordPress 6.9.4 easy.jobs v2.7.1 LocalWP (localhost) April 25, 2026
Video Evidence	https://youtu.be/8x986VrATpl

4. Insights & Suggestions

Performance

- The plugin appears to call the external API on every page load.
- Add WordPress transient caching for job listing data to reduce repeated API calls.

UX Improvements

- Add a setup wizard for first-time users who have not connected an API key.
- Show inline validation errors next to each field.
- Make PRO feature badges clearly link to an upgrade or pricing page.

5. Summary

Metric	Value
Plugin Version	easy.jobs v2.7.1
Total Test Cases	22
Modules Covered	7 (Installation, Auth, Jobs, Frontend, Candidates, Settings, Security/Edge Cases)
Bugs Found	8 bugs (3 Critical, 4 High, 3 Medium)
Testing Method	Manual Testing + Source Code Analysis
Screenshot Placeholders	29 screenshots embedded + video evidence rows added

Paste any additional video evidence YouTube links in the Video Evidence rows of each test case and bug report.
